MEMORANDUM FOR DIRECTOR, SMALL AND DISADVANTAGED BUSINESS UTILIZATION DIRECTOR, BALLISTIC MISSILE DEFENSE ORGANIZATION

SUBJECT: Audit Report on the Small Business Innovation Research Program at the Ballistic Missile Defense Organization (Report No. 95-153)

We are providing this report for your review and comments. The audit was performed in response to a complaint to the DoD Hotline regarding the implementation of the Small Business Innovation Research program at the Ballistic Missile Defense Organization. Comments on a draft of this report were considered in preparing the final report.

DoD Directive 7650.3 requires that all recommendations be resolved promptly. The Director, Small and Disadvantaged and Business Utilization, is requested to provide additional comments on Recommendations 1.b. and 1.c. by May 22, 1995. The Ballistic Missile Defense Organization comments were fully responsive.

We appreciate the courtesies extended to the audit staff. If you have questions on this audit, please contact Mr. Garold E. Stephenson, Audit Program Director, at (703) 604-9332 (DSN 664-9332) or Mr. Henry F. Kleinknecht, Audit Project Manager, at (703) 604-9324 (DSN 664-9324). The distribution of this report is in Appendix F. The audit team members are listed inside the back cover.

SMALL BUSINESS INNOVATION RESEARCH PROGRAM AT THE BALLISTIC MISSILE DEFENSE ORGANIZATION

EXECUTIVE SUMMARY

Introduction. This audit was performed in response to a complaint to the DoD Hotline regarding implementation of the Small Business Innovation Research (SBIR) program at the Ballistic Missile Defense Organization. The complainant alleged that the Ballistic Missile Defense Organization did not comply with the SBIR program Phase I selection criteria published in the DoD FY 1994 SBIR Program Solicitation. This report was based on our evaluation of Ballistic Missile Defense Organization compliance with legislation and DoD policy for Phase I of the three phases of the SBIR program. The overall SBIR program within the Federal Government provides about \$1 billion annually to small businesses. DoD budgeted \$343 million in FY 1994 for the SBIR program.

Objectives. The audit objective was to determine whether the Ballistic Missile Defense Organization complied with legislation and DoD policy covering commercial potential requirements for Phase I of the SBIR program. To answer the DoD Hotline complaint, we determined whether the Ballistic Missile Defense Organization FY 1994 SBIR program Phase I evaluation criteria and other evaluation procedures adequately addressed Phase I evaluation criteria for commercial potential in the DoD FY 1994 SBIR Program Solicitation. We also reviewed the internal controls applicable to the audit objectives.

Audit Results. The Ballistic Missile Defense Organization funded SBIR program Phase I projects that did not satisfy the legislative requirement for commercial potential to identify Phase II funding commitments for Phase I proposals. As a result, DoD and the Ballistic Missile Defense Organization may be funding SBIR projects without adequate potential for private-sector commercialization of technology developed through Federal research and development. We did not substantiate the complaint that the Ballistic Missile Defense Organization did not adequately address commercial potential in evaluating proposals for Phase I award. Details of the DoD Hotline complaint are discussed in Other Matters of Interest. Audit results are discussed in Part II.

Internal Controls. The Office of Small and Disadvantaged Business Utilization did not have procedures in place to ensure that the DoD SBIR program policy complied with legislative guidance. We conclude the internal control weakness is material. See Part I for the internal controls reviewed and Part II for details on the weakness. **Potential Benefits of Audit**. Strengthening internal controls for the SBIR program will increase emphasis on commercial potential for SBIR projects and adherence to legislative requirements. However, the benefits cannot be quantified. Appendix D summarizes potential benefits from the audit.

Summary of Recommendations. We recommend that the Director, Small and Disadvantaged Business Utilization, either revise the DoD SBIR program Phase I evaluation criteria to address commercial potential, including the requirement for the existence of Phase II funding commitments from private-sector or non-SBIR funding sources, or propose legislative changes to eliminate the requirement. We recommend that the Director, Small and Disadvantaged Business Utilization, obtain all appropriate coordinations, including legal review, of future DoD SBIR program policy to ensure compliance with statutory requirements for the SBIR program. We also recommend that the Director, Ballistic Missile Defense Organization, require the Ballistic Missile Defense Organization SBIR program evaluation criteria used when evaluating SBIR proposals.

Management Comments. The Office of Small and Disadvantaged Business Utilization stated that the SBIR legislation included a drafting error and agreed to propose that DoD support a technical correction in the SBIR legislation. The Ballistic Missile Defense Organization agreed to document consideration of commercial potential in review of future SBIR Phase I proposals. See Part II for a summary of the management comments on the recommendations and Part IV for the full text of management comments.

Audit Response. The Director, Small and Disadvantaged Business Utilization, did not provide a completion date for the agreement to propose that DoD support a technical correction in the SBIR legislation and did not address internal control procedures to ensure that the SBIR program policy complied with legislative guidance. We request additional comments from the Director, Small and Disadvantaged Business Utilization, by May 22, 1995. The Ballistic Missile Defense Organization comments on the recommendation were fully responsive.

This report was prepared by the Contract Management Directorate, Office of the Assistant Inspector General for Auditing, Department of Defense.

Part I - Introduction

Background

The SBIR Program. The SBIR program provides funding for the technological innovations of small businesses working on Federal research and development projects. This funding brings cost-effective research and development expertise to Federal agencies and encourages entrepreneurs to find new commercial uses for Federal technology and innovative goods and services that can be sold in domestic and international markets.

The purpose of the program is to develop and stimulate technological innovations that meet the research and development needs of the Federal Government. The goal of the SBIR program is to increase private-sector commercialization and utilization of the inventions developed by Federal research. The SBIR Program is explained more fully in Appendix A. The entire text of the original SBIR Program legislation and amendments are in Appendix B.

Small Business Administration and DoD SBIR Program Policy. As mandated, the Small Business Administration developed an SBIR program policy directive that DoD used to established DoD SBIR program policy. The basic design of the DoD SBIR Program was in accordance with the Small Business Administration SBIR Policy Directive. The DoD FY 1994 SBIR program solicitation 94.2 states, "The guidelines presented in this solicitation incorporate and exploit the flexibility of the Small Business Administration Policy Directive to encourage proposals based on scientific and technical approaches most likely to yield results important to DoD and the private sector." The entire text of the Small Business Administration and DoD evaluation criteria for SBIR are in Appendix C.

DoD Hotline Complaint. A small business contractor submitted a DoD Hotline complaint regarding BMDO implementation of the SBIR program. The complaint alleged that BMDO failed to consider one of the four evaluation criteria described in section 4.2 of the FY 1994 DoD SBIR program solicitation 94.1. That criterion is "b. the potential for commercial (Government or private sector) application and the benefits expected to accrue from this commercialization."

The DoD Hotline complaint was not substantiated. Even though BMDO evaluation criteria for FY 1994 SBIR program Phase I proposals did not specifically address the cited evaluation criterion as described in the DoD FY 1994 SBIR program solicitation 94.1, commercial potential was considered in the evaluation and selection process for Phase I awards.

We determined, however, that Small Business Administration and DoD SBIR program policy did not adequately cover legislative requirements defining commercial potential for SBIR program Phase I projects. Results of the audit are in Part II.

Objectives

We conducted this audit in response to a complaint to the DoD Hotline that the Ballistic Missile Defense Organization (BMDO) did not comply with the Small Business Innovation Research (SBIR) program Phase I selection criteria published in the DoD FY 1994 SBIR program solicitation 94.1.

The primary audit objective was to determine whether BMDO complied with SBIR program Phase I legislation and DoD policy covering commercial potential for SBIR projects. To answer a complaint to the DoD Hotline, we determined whether the BMDO FY 1994 SBIR program Phase I evaluation criteria and evaluation procedures adequately addressed commercial potential criteria in the DoD FY 1994 SBIR program solicitation 94.1. We also reviewed the internal controls applicable to the audit objective.

Scope and Methodology

BMDO SBIR Program Phase I Proposals. BMDO received about 600 SBIR program Phase I proposals in response to the DoD FY 1994 SBIR program solicitation 94.1. Of the 600 SBIR Phase I proposals, BMDO selected 115 for funding, at a cost of about \$7 million. We judgmentally selected 10 of the funded SBIR program Phase I proposals for review.

SBIR Program Legislation and Policy. We reviewed the public laws establishing and enhancing the SBIR program and the Small Business Administration, DoD, and BMDO policy or guidance governing the implementation of the SBIR program. We also interviewed Small Business Administration, DoD, and BMDO officials responsible for implementing the SBIR program.

Audit Period, Standards, and Locations. This program audit was made from August through November 1994. The audit was made in accordance with auditing standards issued by the Comptroller General of the United States, as implemented by the Inspector General, DoD. Accordingly, we included tests of internal controls considered necessary. We did not use computer-processed data or statistical sampling procedures to conduct this audit. Organizations visited or contacted are listed in Appendix E.

Internal Controls

Internal Controls Reviewed. We reviewed internal controls at the Office of Small and Disadvantaged Business Utilization to verify that DoD SBIR program policy complied with significant legislated requirements applicable to the SBIR program.

Adequacy of Internal Controls. The audit identified a material internal control weakness as defined by DoD Directive 5010.38, "Internal Management Control Program," April 14, 1987. Internal controls for the SBIR program were not adequate to ensure that DoD SBIR program policy complied with significant legislated requirements. Management's self-evaluation of its internal controls did not address appropriate coordinations of SBIR program policy, including legal review, to ensure compliance with legislative requirements. Recommendation 1.c., if implemented, will correct the weakness. The benefits from correcting the internal control weakness are nonmonetary. See Appendix D for the nonmonetary benefits resulting from the audit. A copy of the report will be provided to the senior official responsible for internal controls in the Office of the Under Secretary of Defense for Acquisition and Technology.

Prior Audits and Other Reviews

General Accounting Office Report No. GAO/RECD-92-37 (OSD Case No. 8853-A), "Small Business Innovation Research Shows Success but Can be Strengthened," March 30, 1992, states that, even though many SBIR projects have not yet had sufficient time to achieve their full commercial potential, the program is showing success in Phase III activity. As of July 1991, the program generated about \$1.1 billion in Phase III sales and additional funding for technical development, two key indicators of the program's commercial trends. In addition, as much as \$3 billion more was expected to be generated by the end of 1993. The majority of this Phase III activity occurred in the private sector, showing a trend toward one of the program's goals: increasing private-sector commercialization.

However, the major Federal SBIR agencies differ in their responses to the goal of private-sector commercialization, as shown by their wide variation in average sales per project. Average sales per project ranged from a low of \$161,000 for the National Aeronautics and Space Administration to a high of \$677,000 for the Department of Health and Human Services. Another difference in the commercialization goal is that the percentage of project sales to the private sector ranged from a low of 40 percent for DoD to a high of 92 percent for the Department of Health and Human Services. The General Accounting Office made no recommendations but states, under Matters for Congressional Consideration: To further the goal of increasing private-sector commercialization, the Congress may want to consider whether DoD should place greater emphasis on commercialization through such means as identifying and selecting dual-use technologies for SBIR awards.

DoD objected to the comparison of DoD's commercialization results with those of other agencies because of major differences in agency mission that affect commercialization.

5

Part II - Finding and Recommendations

Commercial Potential Requirements for Phase I of the Small Business Innovation Research Program

BMDO funded SBIR program Phase I projects that did not satisfy legislative requirements for commercial potential to identify Phase II funding commitments from private-sector or non-SBIR funding sources. This inappropriate funding occurred because the Small Business Administration and DoD did not issue policy for the SBIR program that adequately addressed commercial potential requirements legislated for Phase I of the SBIR program and because no internal controls required coordination to ensure compliance with legislated SBIR requirements. In addition, BMDO did not document that it used the evaluation criteria that DoD established for SBIR program Phase I projects. As a result, DoD and BMDO may be funding SBIR projects that do not meet the primary goal of the SBIR program, which is to fund projects that have adequate potential for private-sector commercialization.

Legislative Requirements for Commercial Potential

We reviewed 10 SBIR program Phase I proposals that BMDO funded. Although most proposals identified some commercial potential, none of the proposals identified Phase II funding commitments from private-sector or non-SBIR funding sources as required by Public Law 102-564. Two of the 10 proposals did identify private-sector companies that expressed interest in the technologies being developed but, again, the proposals did not identify any private-sector or non-SBIR funding commitments.

The table shows whether the SBIR proposals identified potential commercial applications and whether the SBIR proposals identified the existence of Phase II funding commitments from private-sector or non-SBIR funding sources.

Commercial Potential Identified for SBIR Phase I Projects					
	.	Existence of			
	Potential	Phase II Funding			
SBIR Proposal	Commercial Application	Commitments from Private-Sector			
<u>Reviewed</u>	Identified in Proposal	or Non-SBIR Funding Sources			
1	Yes	No			
2	Yes	No			
3	Yes	No			
4	Yes	No			
5	Yes	No			
6	No	No			
7	Yes	No			
8	Yes	No			
9	Yes	No			
10	Yes	No			

Adherence of Program Policy and Guidance to SBIR Legislation

Legislation. Public Law 97-219 established and defined the SBIR program. Public Law 102-564 amends and redefines the SBIR program, placing significantly more emphasis on commercial potential for SBIR projects. The increased emphasis on commercial potential includes a Phase I requirement for the existence of Phase II funding commitments from private-sector or non-SBIR funding sources.

Small Business Administration and DoD SBIR Program Policy. Based on the public laws, the Small Business Administration developed an SBIR program policy directive that DoD used to established DoD SBIR program policy.

Both the Small Business Administration policy and the DoD policy include evaluation criteria for SBIR program Phase I projects. However, the legislation, Small Business Administration evaluation criteria, and DoD evaluation criteria for the SBIR program each place different degrees of emphasis on evaluating commercial potential for SBIR projects.

Requirements Not in Small Business Administration or DoD SBIR Program Evaluation Criteria. Neither the Small Business Administration nor the DoD SBIR program Phase I evaluation criteria require the existence of Phase II funding commitments from private-sector or non-SBIR funding sources for SBIR program Phase I projects, as required by public law. As a result, SBIR program administrators and participants may not have implemented the SBIR program as legislated. The DoD SBIR program policy should address the SBIR program Phase I commercial potential requirement defined in Public Law 102-564 that requires the existence of Phase II funding commitments from private-sector or non-SBIR funding sources. Adequacy of DoD Internal Controls Over SBIR Program Policy. Because DoD did not have internal controls that require appropriate coordinations, including legal reviews, DoD had no assurance that SBIR policy complied with legislative requirements.

Documentation of BMDO SBIR Program Evaluation Criteria. BMDO used the DoD SBIR program Phase I evaluation criteria to establish the BMDO SBIR program Phase I evaluation criteria. However, the BMDO evaluation criteria are more vague than the DoD evaluation criteria and do not directly mention any commercial potential, as required by public law. The program manager for the BMDO SBIR program stated that commercial potential is considered for each proposal considered for Phase I funding award. The evaluators of the proposals discuss commercial potential during the selection process; however, the BMDO SBIR program manager does not document these discussions. As a result, consideration of commercial potential is not available for any review.

Small Business Administration, DoD, and BMDO Interpretation of the SBIR Program Legislation. Small Business Administration, DoD, and BMDO representatives for the SBIR program stated the intent of Public Law 102-564 was not to require SBIR program Phase I proposals to identify Phase II funding commitments from private-sector or non-SBIR funding sources. The SBIR program Phase I proposals were so innovative that the requirement for Phase II private-sector or non-SBIR funding commitments for Phase II proposals were so innovative that the requirement for Phase II private-sector or non-SBIR funding commitments was unreasonable and would severely hinder the SBIR program.

SBIR program representatives should propose legislative changes to the SBIR program if they believe the legislation does not intend to require the existence of Phase II funding commitments from private-sector or non-SBIR funding sources to demonstrate commercial potential for SBIR Phase I projects.

Meeting the Primary Goal of the SBIR Program

Legislative History for SBIR Program. The SBIR program purpose is to fund innovative proposals that have clear market potential, not to provide hand-outs to small businesses. The SBIR goal is designed to provide small businesses with research and development seed money to encourage additional private investment in the small businesses. The SBIR program legislation facilitates the ability of small businesses to attract venture capital as well as other financial commitments from the private sector.

SBIR Program Goal for Private-Sector Commercialization. One purpose of Public Law 102-564 is to "emphasize the program's goal of increasing private-sector commercialization of technology developed through Federal research and development." However, without appropriate guidance from the Small Business Administration, DoD, and BMDO, the SBIR program may not achieve the intended results.

Recommendations, Management Comments, and Audit Response

1. We recommend that the Director, Small and Disadvantaged Business Utilization, Office of the Under Secretary of Defense for Acquisition and Technology:

a. Revise the DoD Small Business Innovation Research Program Phase I evaluation criteria to more fully address commercial potential, including a requirement for the existence of Phase II funding commitments from private-sector or non-SBIR funding sources, or

b. Propose legislative changes to eliminate the Small Business Innovation Research program Phase I requirement for commercial potential that includes existence of Phase II funding commitments from private-sector or non-SBIR funding sources.

c. Obtain all appropriate coordinations, including legal review, of future DoD Small Business Innovation Research program policy to ensure compliance with legislative requirements for the Small Business Innovation Research program.

Management Comments. The Office of Small and Disadvantaged Business Utilization concurred with recommendation 1.b. and stated its office will propose that DoD support a technical correction to the SBIR program legislation that corrects the mistaken paragraph referenced in Section 103(a). For the full text of management comments, see Part IV.

Audit Response. The Office of Small and Disadvantaged Business Utilization comments did not provide a completion date for the proposed technical correction to the SBIR program legislation and did not address internal controls to ensure that DoD SBIR program policy complies with legislative requirements for the SBIR program. We request the Office of Small and Disadvantaged Business Utilization comment on the final report.

2. We recommend that the Director, Ballistic Missile Defense Organization, require the Ballistic Missile Defense Organization's Small Business Innovation Research program manager to formally document that the DoD Small Business Innovation Research program evaluation criteria are used to evaluate Small Business Innovation Research proposals.

Management Comments. BMDO concurred with the recommendation to document consideration of commercial potential. BMDO implemented the recommendation as of February 13, 1995, by adding a question regarding the existence of commercial potential to the SBIR proposal evaluation. For the full text of management comments, see Part IV.

Part III - Additional Information

Appendix A. Small Business Innovation Research Program

Three Phases of the SBIR Program. Public Law 97-219, "Small Business Innovation Development Act of 1982," July 22, 1982, mandated that the SBIR program be administered in three phases. Phases I and II are intended to determine and develop the scientific and technical merit and feasibility of ideas that appear to have commercial potential. Phase I provides up to 6 months and \$100,000 for the company to explore the viability and feasibility of the proposed idea. Phase II provides up to 2 years and allots \$750,000 to the company to further develop the idea to meet program needs. Completion of the total research and development requirement is not necessary at the end of Phase II and, rather, extends through Phase III. Phase III is a follow-on stage, in which the completion and commercial application of a technology is funded with non-Federal or non-SBIR Federal funds.

The table shows the funding and time period associated with each phase of the SBIR Program according to Public Laws 97-219 and 102-564.

Three Phases of the SBIR Program						
Phase	Threshold	Time Period	Stage	Legislative Requirement		
Ι	\$100,000	6 months	Concept exploration for viability and feasibility	Phase II funding commitment required from private-sector or non-SBIR funding sources.		
п	\$750,000	2 years	Prototype and further testing of viability and feasibility	Phase III funding commitment required from private-sector or non-SBIR funding sources.		
III	Determined by commitments received	Determined by contracts made	Completion of testing/ application and/or manufacturing within public or private sectors	Funding required solely by non-Federal or non-SBIR sources.		

The overall SBIR program within the Federal Government provides about \$1 billion annually to small businesses. DoD budgeted \$343 million in FY 1994 for the SBIR program.

Responsibility for Coordination of the SBIR Program. The Small Business Administration has responsibility for coordinating the SBIR program within the Federal Government.

Policies Governing the SBIR Program. Federal law, the Small Business Administration, and each appropriate DoD organization issue policies governing the SBIR program. The Small Business Administration and DoD policies each reflect the Federal guidance slightly differently. The following discusses the

original and amended legislation, the Small Business Administration policy, the DoD policy, and the BMDO guidance for Phase I of the SBIR program, with emphasis added to the areas that address commercial potential.

Original SBIR Program Legislation. Public Law 97-219 established the SBIR program. The legislation states that Phase I awards will be made based, "... insofar as possible, on the scientific and technical merit and feasibility of ideas submitted pursuant to SBIR program Solicitations."

SBIR Program Amendments. Public Law 102-564, "Small Business Research and Development Enhancement Act of 1992," October 28, 1992, amends and redefines the SBIR program, placing significantly more emphasis on commercial potential for SBIR projects. The increased emphasis on commercial potential includes a requirement that a Phase II funding commitment from private-sector or non-SBIR funding sources has to exist in Phase I. Public Law 102-564 reads:

> (4) the term "Small Business Innovation Research Program" or "SBIR" means a program under which a portion of a Federal agency's research or research and development effort is reserved for award to small business concerns through a uniform process having-

> (A) a first phase for determining, insofar as possible, the scientific and technical merit and feasibility of ideas *that appear to have commercial potential, as described in subparagraph* (B)(ii) submitted pursuant to SBIR program solicitations;

(B) a second phase, to further develop proposals which meet particular programs needs, in which awards shall be made based on the scientific and technical merit and feasibility of the proposals, as evidenced by the first phase, considering, among other things, the proposal's commercial potential, as evidenced by-

(ii) the existence of second phase funding commitments from private sector or non-SBIR funding sources. [emphasis added]

.

.

.

.

15

Appendix B. Small Business Innovation Research Program Legislation

Public Law 97-219, "Small Business Innovation Development Act of 1982," July 22, 1982

Public Law 97-219 established and defined the SBIR Program. SBIR is a program under which a portion of a Federal agency's research or research and development funding is reserved for award to small business concerns through a uniform process having:

(A) a first phase for determining, insofar as possible, the scientific and technical merit and feasibility of ideas submitted pursuant to SBIR program Solicitations; [emphasis added]

(B) a second phase to further develop the proposed ideas to meet the particular program needs, the awarding of which shall take into consideration the scientific and technical merit and feasibility evidenced by the first phase and, where two or more proposals are evaluated as being of approximately equal scientific and technical merit and feasibility, special consideration shall be given to those proposals that have demonstrated third phase, non-Federal capital commitments; and

(C) where appropriate, a third phase in which non-federal capital pursues commercial applications of the research or research and development and which may involve follow-on non-SBIR funded production contracts with a Federal agency for products or processes intended for use by the United States Government;

Public Law 102-564, "Small Business Research and Development Enhancement Act of 1992," October 28, 1992

Public Law 102-564 amends and redefines the SBIR program. The Public Law reads:

(4) the term "Small Business Innovation Research Program" or "SBIR" means a program under which a portion of a Federal agency's research or research and development effort is reserved for award to small business concerns through a uniform process having-

(A) a first phase for determining, insofar as possible, the scientific and technical merit and feasibility of ideas *that appear to have commercial potential, as described in subparagraph* (B)(ii) submitted pursuant to SBIR program solicitations; [emphasis added]

(B) a second phase, to further develop proposals which meet particular programs needs, in which awards shall be made based on the scientific and technical merit and feasibility of the proposals, as evidenced by the first phase, considering, among other things, the proposal's commercial potential, as evidenced by-

(i) the small business concern's record of successfully commercializing SBIR or other research;

(ii) the existence of second phase funding commitments from private sector or non-SBIR funding sources; [emphasis added]

(iii) the existence of third phase, follow-on commitments for the subject of the research; and

(iv) the presence of other indicators of commercial potential of the idea; and

(C) where appropriate, a third phase-

(i) in which commercial applications of SBIR-funded research or research and development are funded by non-Federal sources of capital or, for products or services intended for use by the Federal Government, by follow-on non-SBIR Federal funding awards; and

(ii) for which awards from non-SBIR Federal funding sources are used for the continuation of research or research and development that has been competitively selected using peer review or scientific review criteria.

Appendix C. Small Business Administration and DoD Small Business Innovation Research Program Policies

Policy Directives. The Small Business Administration "SBIR Program Policy Directive," January 26, 1993, revises the existing policy to reflect new statutory requirements and comments received from members of Congress, the public, participating agencies, associations, and small business concerns. The directive provides guidance to participating Federal agencies for the general conduct of their SBIR programs. Section IV, "Method of Selection and Evaluation Criteria," paragraph (B), "Evaluation Criteria," of the directive provides that each agency in its evaluation process shall develop a standardized method that will consider, among other things, the ". . . commercial benefits that may be derived from the research."

DoD Policy. In addressing commercial potential, the DoD "SBIR Program Policy Letter," April 1, 1994, and the FY 1994 DoD SBIR program solicitation 94.1, section 4.2, "Evaluation Criteria - Phase I," requires the evaluator to consider "the potential for commercial (Government or private sector) application and benefits expected to accrue from this commercialization" when selecting proposals for award.

BMDO Guidance. BMDO established its own evaluation criteria for FY 1994 SBIR program Phase I proposals. The evaluation criteria are:

How good is the science or engineering?

How is the Innovation exciting?

Are the PI [principal investigators] and firm qualified?

How will BMDO benefit after Phase 2?

How will Phase 1 get BMDO to a Phase 2 decision?

Small Business Administration Policy. Section IV, "Method of Selection and Evaluation Criteria," paragraph (B) "Evaluation Criteria," of the Small Business Administration "SBIR Program Policy Directive," January 26, 1993, provides that each agency, in its evaluation process, shall develop a standardized method that will consider, as a minimum, the following factors for Phase I:

a. The technical approach and the anticipated agency and *commercial* benefits that may be derived from the research. [emphasis added]

b. The adequacy of the proposed effort and its relationship to the fulfillment of requirements of the research topic or subtopics.

c. The soundness and technical merit of the proposed approach and its incremental progress toward topic or subtopic solution.

d. Qualifications of the proposed principal/key investigators supporting staff and consultants.

DoD Policy. DoD "SBIR Program Policy Letter," April 1, 1994, and the FY 1994 DoD SBIR program solicitation section 4.2, "Evaluation Criteria - Phase I," state that the following factors should be considered when selecting SBIR proposals.

a) The soundness and technical merit of the proposed approach and its incremental progress toward topic or subtopic solution.

b) The potential for commercial (Government or private sector) application and the benefits expected to accrue from this commercialization. [emphasis added]

c) The adequacy of proposed effort for fulfillment of requirements of the research topic.

d) The qualification of proposed principal/key investigators supporting staff and consultants. Qualification include not only the ability to perform the research and development but also the ability to commercialize the results.

Appendix D. Summary of Potential Benefits Resulting From Audit

Recommendation Reference	Description of Benefit	Type of Benefit
1.a.	Compliance with Regulations or Laws. Requires DoD to increase emphasis on commercial potential for SBIR program Phase I projects as required by Public Law 102-564.	Nonmonetary.
1.b.	Compliance with Regulations or Laws. Proposes legislative changes to the SBIR program if compliance with Recommendation 1.a. is not possible.	Nonmonetary.
1.c.	Internal Controls. Requires coordination, including legal review, of future DoD SBIR program policy to ensure compliance with SBIR program legislation.	Nonmonetary.
2.	Compliance with Regulations or Laws. Requires the BMDO SBIR program manager to document that DoD SBIR program evaluation criteria are used.	Nonmonetary.

ness concern under a small basiness impor-tion research program sater into follow-on, non-BBIE funded contracts with the small business concern for such research, develop-ment, or production. "(11) A level of \$75,000 for the amount of funds which an agency may sward in the first phase of a small business incovation re-search program, sech amount to be adjusted by the Administration on October 1, 1997, and when the same the superfer a sufficient and siderations.

EXCERPT FROM SECTION_BY-SECTION ANALYSIS OF S. 2941, UPON FINAL SENATE FASSAGE

S16514

CONGRESSIONAL RECORD-SENATE

October 3, 1992

.....

STIR is closely patterned after the SBIR Program in terms of its funding source and its competitive process. Five agencies—the Departments of De-fense, Energy, Health and Human Serv-ices, and the National Aeronautics and Space Administration and the National Science Foundation-may allocate a small percentage of their extramural earch or research and development funds to STTR awards. The percentage increases as follows: 0.05 percent in 1994, 0.1 percent in 1995, and 0.15 per-cent in 1996. This equates to approximately \$25 million the first year, over \$50 million the second year, and over \$75 million in the third year, depending on those agencies future appropriations.

The STTR Program is authorized for only 3 years. The General Accounting Office will conduct a review of its suc-cess in its final year. At that point, it will be up to Congress to decide when er to continue the program. The STTR program is designed as a pilot program because concerns have been raised about the ability of small businesses and large nonprofit institutions to work together effectively and equi-tably to commercialise. Various safe-guards have been included to ensure that STTR funds are used in the manner for which they are intended. Mr. President, the cold war is over,

but the struggle for global economic security continues. We need the SBIR rogram and others like it to ensure that we are able to compete in an increasingly complex, technology-driven world. Our major competitors have no qualms about their governments providing means to encourage innovation at small or large businesses. The SBIR Program is a tool that our country must have to out-commercialize our competitors and give our small businesses a chance to compete in the big leagues

Finally, as I stated earlier, this substitute amendment is the product of much compromise and negotiation. It reflects the work of the Small Business Committees and Senate Armed Services Committees on both sides, and the House Science and Technology Committee. I would particularly like to recognize Congressman IXE SKELTON'S efforts at shepherding the bill through the House. Also, Patty Forbes of the Senate Small Business Committee staff has been of great assistance in preparing this amendment.

Mr. Fresident, I urge passage of the amendment in the nature of a sub-stitute and the bill, S. 2941, the Small Business Innovation Research Program Reauthorization of 1992.

I ask unanimous consent that a section-by-section analysis be printed in the RECORD.

There being no objection, the mate-rial was ordered to be printed in the RECORD, as follows:

The Small Business Innovation Research Program Resuthorization Act of 1992. Section 102 .- Findings and Purpose

Congress finds that the Small Business Ina successful method of involving small busi-nesses in furthering Federal research and denesses in furthering Federal research and de-velopment, encouraging technological inno-vation and stimulating commercialization of Federal technologies. The program has im-proved the nation's competitivances and in-creased U.S. suports from small businesses. However, small business' share of Federal re-search and development funds has not sig-nificantly changed over the life of the pro-gram. Additional outreach efforts are nec-mons to match the sould of the strictual engram. Additional Gureach efforts are neo-essary to meet the goal of the original ena-bling legislation to encourage socially and economically disadvantaged firms' participa-tion in SBIR. Congress baleves the SBIR program should be expanded and improved. Section 103.—Amendments to the SBIR program

This section makes saveral charges to the Small Business Innovation Research (SBIR) program as authorised by Section 9 of the Small Business Act, which are intended to: encourage federal agencies to provide great-er stantion to commarcialisation; inorease the total extramural research and developmant (R & D) funds allocated for SBIR and the size of individual awards made to an nall the size of individual awards made to amall business; and, improve the administrative processes by which small businesses receive awards and ensure that they retain appro-priate intellectual property rights and ap-propriate rights to perform follow-on funding

propriate rights to perform follow-on funding apreaments wisting to research they devel-oped under SBIR Phases I and II. Subsection (a)-This subsection adds "commercial potential" as a consideration in the proposal process. SBIR evaluators may look to the following as evidence of commercial potential: (1) the small business' record of success-fully commercializing SBIR or other re-eases.

search

(2) the existence of Phase II funding com-litments from private sector or non-SBIR mite

Michaels from private social of bar-solie Federal finding sources; (3) the existence of Phase III follow-on commitments, which may be funding com-mitments or other types of substantial com-mitments, i.e., production agreements; and, (4) such other indicators of commercial po-tential as may be appropriate.

tential as may be appropriate. Though some agencies intestionally direct their programs toward proposals with great-er commercial potential, insufficient atten-tion has been paid to this aspect of the BBIR program. Federal extramural R & D funds are best spent on awards which can further individual agencies' missions and the coun-try's economic security. Specifically, the De-partment of Defense could eshape its pro-gram significantly through prester attention to prometts for commercialization. Through gram significantly through prester attaction to prospects for commercialization. Through SBIR, the Department should, to the maxi-mum axient practicable, provide emphasis on converting the capabilities of businesses that are economically depandent on Depart-ment of Defause business to apphilties hav-ing both defause and non-defause commercial available. licetions ADD

Sab ection (b)-This subsection incre Subsection (b)-This subsection increases the paroantage of Federal astramural R & D funds allocated for SBIR awards by agencies with extramural R & D budgets of more than 100 million. The percentage will increase from 1.25% to 1.5% for fiscal years 1903 and 1904, to 7% for fiscal years 1903 and 1904, to 7% for fiscal years 1905 and 1904, and 1904 to 1% for fiscal years 1905 and 1905, and 1904 to 1% for fiscal years 1905 and 1905, and 1904 to 1% for fiscal years thereafter. This sub-section also prohibits the use of SBIR fund-

eral research and development funds to SECTION-BY-SECTION ANALYEES OF SUBSTITUTES ing for the purpose of funding administrative continercialize Federal and other tech-bology.
STTR is closely patterned after the Section 101-Title Section 101-Title Section 101-Title Instruments in the total funds dedicated by the Depart-in the total funds dedicated by the Depart-

in the total funds dedicated by the Department of Defance to BBIR swards, certain De-partment of Defance research and develop-ment activities related to operational sys-tems development and atomic energy re-search, arcluding the Department of Emer-gy's nuclear waspons and naval reactors pro-grama. This is not intended to archive the sources of the sectors of nuclear weapons complex remediation activ-ity budget from the total funding available

ity budget from the total funding svallable to the SBIR program. Subsection (d)—This subsection requires agancies to give special consideration to the oritical technologies lists prepared by the Secretary of Defense and Technology Policy when preparing general research topics lists. These lists identify technologies, which are when preparing reneral research topics lists. These lists identify technologies which are important to the Nation's national and con-nomic security. This section is not intended to require that squackes above a preference in making awards to proposals for $R \neq D$ in critical technologies areas. However, accord-ing to the Small Buainess Administration, nearly 80% of all awards are now made in critical technologies areas. When prop-ticable sencies areas apportant to maintain nearly 20% of all awards are now made in critical technologies areas. When prac-ticable, agencies are encouraged to maintain this level and to work to achieve a goal of 20%. Agencies are also encouraged to develop broad research topics to ensure that propo-als are not limited by narrow solicitations. Subsection (s)-This subsection requires agencies to make areard payments to redis-onts within 12 months of the award and com-lation of all motiment son-imments Man-

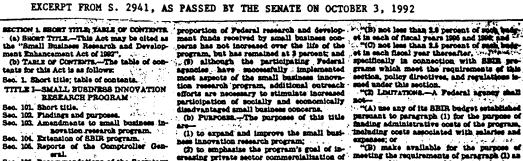

pision of all pertinent requirements. Pay-ments are subject to later audit by the agen-cies should unallowable costs be identified subsequent to peyment. Many awardees have experienced unacceptable delays in receiving after foldes introduction states in receiving reliable results of schenking section. Many awardees have also experisoned dalays in re-ceiving the results of technical evaluations. To improve efficiency and subance the quality of future proposals, the participating agencies are encouraged to respond to re-quests for technical evaluations in a timely and appropriate manner.

Subsection (f)-This section requires the Small Business Administration to make sevanal modifications to its SBIR program pol-icy directive to provide for: (A) retention of small business' rights to

 (A) retention of small business rights to BER project-related data for four years;
 (B) continued use of transformed federal property by small businesses for two years as part of a Phase III SBR project;
 These provision—A & B—address concerns raised about fair and appropriate treatment of small business intellectual property right. They do not roublik the federal score. or small containers interaction property rights. They do not prohibit the federal gov-erament from offering to purchase or other-wise negotisting and making an agreement with an SBIR swardse regarding the rights to data in less than four years. (0) procedures to ansure that, to the axtest practicable, an agency enters into followes, purp SBIR funding arreaments with an BBIR

non-BBIR funding arreements with an BBIR awardee, if the argency intends to pursue the further development of technology which was the subject of that awardee's first and second phase research or research and develant

opment: This change should help encourage SHIR spencies planning to work on a company's SBIR-developed technology after SBIR fund-ing ands to enter into Phase III or non-SBIR funding agreements with the SBIR company. This change is intended to protect small businesses from agrancies which attempt to take over a small business' research effort without adequate compensation. The Gen-tral Accounting Office has recommended that descriptive procedures he developed to muide agracies which is to conduct follow-on wide agracies withing to conduct follow-on guide agencies wishing to conduct follow

meeting the requirements of paragraph (1) as amount of its axtrammral budget for basic re-search which exceeds the percentages speci-

Search which exceeds the percentages mon-field in paragraph (). "(3) Exclusion or CENTADI FUNDOS AGREE-MERTA--Funding agreements with small butiness concerns for research or research and davelopment which result from competi-tion on sub-comment which result from competitive or single source selections other th -

tive or single source selections other than as SBUR program shall not be considered to meet any portion of the percentage require-ments of paragraph (1).". SEC. 105. AMENDMENTS TO SMALL BUSINESS DI-NOVATION RESEARCH PROGRAM.

(a) DEFINITION OF THE SMALL BUSINESS IN-RESEARCH PROGRAM .--NOVATION \$(a)(4) of the Small Business Act (15 U.S.C. \$38(a)(4)) is amended---

(1) in subparagraph (A), by inserting "that (ppear to have commercial potential, as de-noribed in subparagraph (B)(ii)," after "ideas"; and

"ideas"; and (3) by striking subparagraphs (B) and (C) and inserting the following: "(B) a second phase, to further develop pro-posals which meet particular program needs, in which awards shall be made based on the scientific and technical merit and feasibility of the proposal, as evidenced by the first phase, considering, among other things, the proposal's commercial potential, as evianced by-

sfully commercializing SBIR or other arch:

"(ii) the existence of second phase funding commitments from private sector or non-SBIR funding sources;

"(iii) the existence of third phase, followon commitments for the subject of the re-

a committee a shift base

"(C) where appropriate, a third phase-"(C) where appropriate, a third phase-"(I) is which commercial applications of SBUR-funded research or research and devel-ogment are funded by non-Federal sources of capital or, for products or services intended for use by the Federal Government, by fol-low-on non-SBIR Federal funding swards;

"(ii) for which awards from non-SBIR Fed-eral funding sources are used for the con-tinuation of research or research and devel-opmant that has been competitively selected using peer review or scientific review cri-teris; and". eria; and". (b) Required Expenditures for SDIR by

FEDERAL ADENCIER -- Social S() of the Small Business Act (15 U.S.C. 658(1) is amanded to read as follows: "(1) FEDERAL ADENCY EXPERIMENTALS FOR

THE BRIR PROCEAN.

"(1) REQUIRED EXPENDITURE AMOUNTS.-Each Pederal agency which has an extra-mural budget for research or research and (i) the small business innovation research program, the stim such status into and status into a status and status into a status and status and

EXCERPT FROM REPORT OF THE HOUSE COMMITTEE ON SMALL BUSINESS ON H.R. 4400 (June 9, 1992)

21

WHAT H.R. 4400 WOULD DO

L EXTENSION OF SBIR THROUGH FY 2000

Section 3 of the bill would extend the SBIR program for seven additional years, until October 1, 2000. The Committee chose not to make the program permanent because, as the GAO noted in its June 1989 report, to do so would diminish the authority of Congressional Committees in the oversight process.

II. EXPANSION OF THE SBIR PROGRAM

Section 4(b), as reported, increases the percentage of participating federal agencies' extramural R&D budgets that must be set aside for the SBIR program from 1.25 percent in FY 1993 to 3 percent in FY 1997. This expansion would be accomplished gradually, through an increase in the set-aside of .25 percent in 1994 and .5 percent in each of the three following years. Based on current extramural R&D budgets, this expansion would bring the total program funding level to roughly \$1 billion.

III. INCREASED EMPHASIS ON COMMERCIALIZATION

A. Phase I evaluation

Section 4(a) would require that phase I proposals meet a minimum standard of appearance of commercial potential before they are evaluated on the basis on scientific and technical merit. Current law, by contrast, does not require the agencies to consider commercial potential in evaluating phase I proposals.

This change would have the effect of requiring potential SBIR applicants to think through the commercial potential SBIR applicants to think through the commercial potential of their proposed projects from the start, and could thereby increase the probability of successful commercialization. Empirical evidence indicates that the probability of ultimate commercial success of an R&D project is significantly higher when the innovating company begins thinking about commercial potential from the start of the project (Mansfield, 1975).

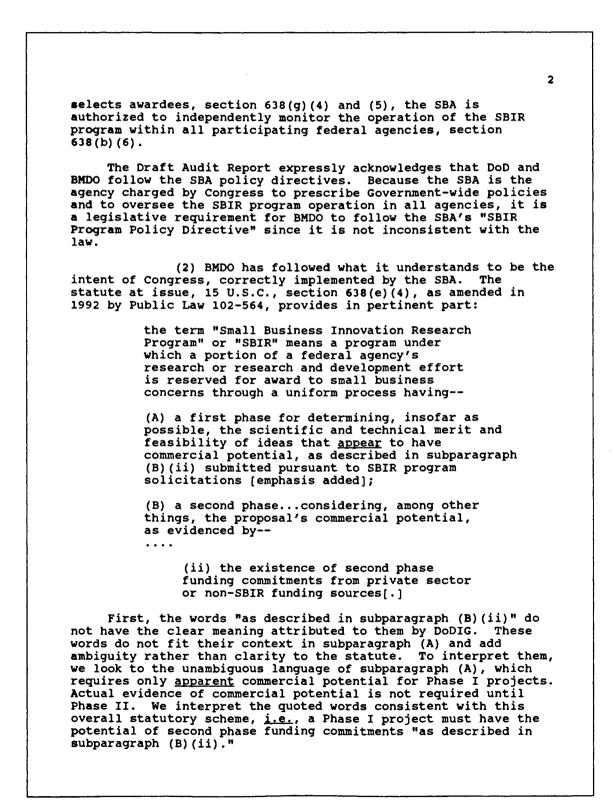

(Massield, 1970). Of course, proposals may have commercial potential in either private sector markets or government procurement markets. But the Committee intends the agencies to give at least as much weight to private-sector commercial potential as to commercial potential in government procurement markets. It is no longer sufficient for mission-oriented agencies like DoD to interpret commercial potential as referring solely to government procurement. The primary purpose of the legislative changes discussed in this section is to increase private-sector commercialization of SBIR research.

B. Phase II evaluation

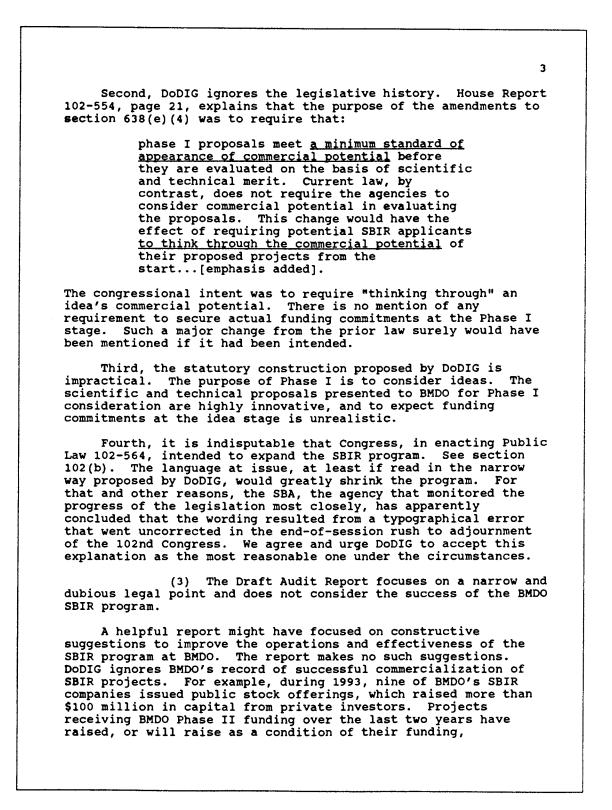

Section 4(a) also requires agencies to increase the weight given to commercial potential in the phase II evaluation process. Current law requires the agencies to consider commercial potential (in the form of a phase III follow-on funding commitment) only in the event that two competing proposals are of approximately equal scientific and technical merit. Under H.R. 4400, scientific and technical merit and feasibility would still be the main evaluation criteria in phase II, but the agency would have to consider commercial po-

Final Report Reference DEPARTMENT OF DEFENSE BALLISTIC MISSILE DEFENSE ORGANIZATION WASHINGTON, DC 20301-7100 TRI February 13, 1995 MEMORANDUM FOR DIRECTOR. CONTRACT MANAGEMENT DIRECTORATE, INSPECTOR GENERAL Comments on DoD Inspector General Draft Audit Report of SUBJECT: Small Business Innovation Research (SBIR) Program at the Ballistic Missile Defense Organization (Project No. 2CH-5031.03), December 9, 1994 The Ballistic Missile Defense Organization (BMDO) submits the following comments on the subject Draft Audit Report: Page 11 Part II, "Findings and Recommendations," Recoma. mendations for Corrective Action Number 2, page 13. This recommendation stems from the finding that the BMDO evaluation criteria for a Phase I project do not directly mention the commercial potential of the idea. In selecting SBIR projects, BMDO has been consistent in considering commercial potential (as required by the DoD "SBIR Program Policy Letter"), but has not been consistent in documenting its consideration of commercial potential. We will implement the Draft Audit Report recommendation by adding questions regarding commercial potential to our review process, in order to document our consideration of commercial potential in review of future SBIR Phase I proposals. b. Part II, "Finding and Recommendations," Legislative Requirements for Commercial Potential, page 10. For Page 8 the following reasons, we do not agree with the finding that BMDO funded SBIR projects without satisfying legislative requirements: (1) BMDO follows DoD policy, which in turn properly defers to policy directives from the Small Business Administration. The specific issue disputed by DoDIG is whether Congress requires that ideas being considered for Phase I funding must already have commercial funding commitments for Phase II. The Draft Audit Report maintains that prior Phase II funding commitments are a statutory requirement; the Small Business Administration (SBA) "SBIR Program Policy Directive" dated January 26, 1993, disagrees. The governing statute, 15 U.S.C. section 638, directs the SBA to issue policy directives for the general conduct of SBIR programs within the Federal Government, section 638(j)(1). The SBA is to provide for standardized SBIR solicitations and a standardized funding process, section 638(j)(1)(A) and (B). Though BMDO unilaterally receives and evaluates SBIR proposals and
