The Omaha District, a member of the local community since 1934, is a regular and significant contributor to not only the Omaha area, but the upper Midwest region as well. As one of Omaha's largest government agencies, the District has more than 850 local employees with an average annual salary of \$75,687, contributing more than \$60,000,000 to the local economy. An additional 425 employees work across 60 offices located throughout the Missouri River Basin in nine states.

Omaha is a full-service district delivering a wide array of multidisciplinary services in military construction, civil works, environmental restoration, and work for other federal agencies. Additionally, there are eight centers of expertise unique to the Omaha District including fuels, transportation, access control points, protective design, dam safety, interior design and military munitions design center supporting agencies and businesses both nationally and internationally.

Some of the other services offered by the Omaha District are:

- Federal civil works activities including administration of the Clean Water Act Section 404 regulatory program in the upper Missouri River basin
- Engineering design and construction for the Army and Air Force in eight Mountain and Upper Midwest states
- Hazardous, toxic, and radioactive waste cleanup: restoring the environment for the U.S. Environmental Protection Agency and the Department of Defense at sites throughout the United States
- Reimbursable program support to a diverse group of Federal partners addressing civil, military, and environmental support arenas
- Delivery of Real Estate products and services supporting all assigned missions and other Federal agencies

District team members are also active and contributing members in their local communities throughout the region. Locally, district members participated in activities such as Operation Santa, Brush Up! Nebraska Paint-a-Thon, fund raising for the Combined Federal Campaign, Bald Eagle Days, National Engineers Week, and Water Safety education at events such as the Missouri River Expo and World O! Water. Additionally, the Omaha District is an active sponsor of the National Society of Black Engineers, as well as the Society of American Military Engineers Mentoring Program as part of STEM outreach program. Established in 1934, the District has more than 83 years of distinguished service marked by engineering excellence, outstanding technical support, and superb multi-disciplinary services. Much of its success can be attributed to a strong work ethic focused upon aggressive execution, technical competence, and effective communication. Some of our ongoing projects date back more than 50 years and contribute to the history of our country. Cheyenne Mountain, located in Colorado Springs, once held North American Aerospace Defense Command, and is still utilized today for military operations. Additionally, The Omaha District decommissions missile sites and cold war bases across the U.S. and maintains several dams on the Missouri River. The district also performs flood risk mitigation throughout the Missouri River Basin to minimize the threat of flooding to those who reside there.
