Enterprise Mission Assurance Support Service (eMASS)

Overview

eMASS is a web-based Government off-the-shelf solution that automates a broad range of services for comprehensive, fully integrated cybersecurity management, including controls-scorecard measurement, dashboard reporting, and the generation of a risk-management framework (RMF) for Department of Defense (DOD) information technology (IT) package reports.

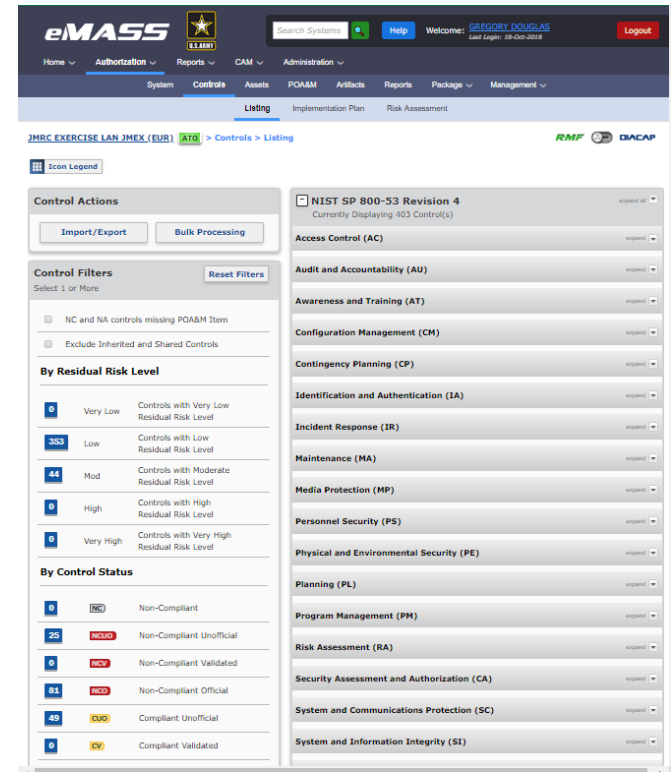

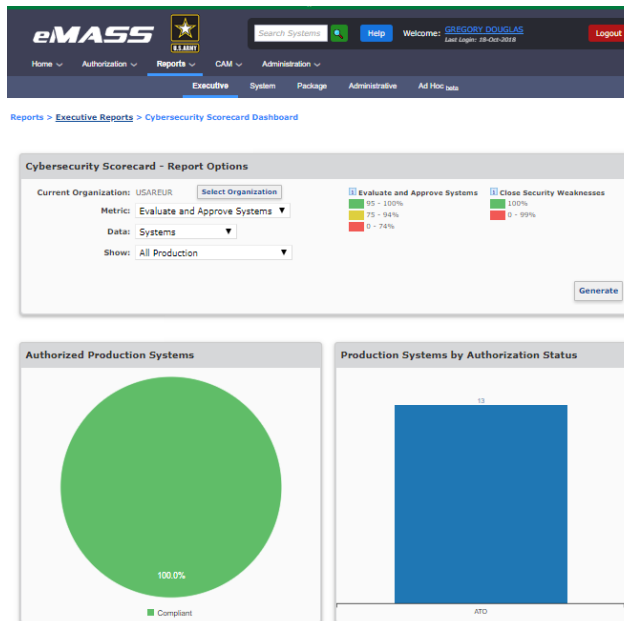

eMASS

eMASS empowers the cybersecurity workforce through its control-requirements wizard, intuitive user interface, linear workflows, integrated computer-based training capability, and autogeneration of all security-compliance package reports so that more time can be spent on securing the network than on interpreting the policy.

Through improved cyber situational awareness, eMASS enables managers to readily identify vulnerabilities and make decisions concerning cybersecurity resources and program needs. Through its central management and governance of an enterprise cyber policy, eMASS promotes speedy delivery of policy changes and dramatically improves the cycle time to effect these changes directly down to individual teams.

eMASS Provides Customers with Unmatched Benefits

- Automated, customizable workflows help users manage essential functions from the enterprise level down to individual system levels.
- Supports reciprocity by providing a common operating picture and a simplified enterprise-architecture environment to facilitate information exchange and dynamic connection decisions.
- Speeds the delivery of critical enterprise infrastructure to support the warfighter.
- Streamlines the RMF assessment, authorization, and connection-approval processes.
- Produces all required security-compliance package reports via integration with security scanning tools and custom reporting options.
- Eliminates variable costs (vendor licensing fees, payments for software updates, escalating operations, and maintenance costs).

- Offers system-security practitioners the flexibility to manage artifacts, establish and monitor inheritance relationships, and collaborate on sudden security-compliance developments.
- Enables quick responses to RMF policy enhancement requests (overlays and assess-only process).

Quick Facts

- Sponsored by DISA and the DOD CIO.
- Established at more than 35 Combatant Commands, Services, and Agencies.
- Supports more than 22,000 user accounts.
- Seamlessly integrates with enterprise web-enabled security assessment tools.
