ASSISTANT SECRETARY OF DEFENSE

3500 DEFENSE PENTAGON
WASHINGTON, DC 20301-3500

OCT 15 2019

MEMORANDUM FOR ASSISTANT SECRETARY OF THE ARMY (INSTALLATIONS,
ENERGY AND ENVIRONMENT)
ASSISTANT SECRETARY OF THE NAVY (ENERGY,
INSTALLATIONS AND ENVIRONMENT)
ASSISTANT SECRETARY OF THE AIR FORCE (INSTALLATIONS,
ENVIRONMENT AND ENERGY)
DIRECTOR, NATIONAL GUARD BUREAU (JOINT STAFF, J8)
DIRECTOR, DEFENSE LOGISTICS AGENCY

SUBJECT: Per- and Polyfluoroalkyl Substances Cleanup Cost Reporting

The Secretary of Defense created a Per- and Polyfluoroalkyl Substances (PFAS) Task Force to manage growing health concerns over releases of these substances and the effects on military installations and their surrounding communities. To support the Department's efforts, we need visibility of the costs associated with the investigation and cleanup of PFAS releases¹ caused by past Department of Defense (DoD) activities, including the National Guard and Reserves. This information will enable the Department to quantify investments in PFAS actions and demonstrate DoD's commitment to protecting human health and meeting our cleanup obligations.

Therefore, I am establishing a new reporting requirement for funding data associated with investigating and cleaning up PFAS at Environmental Restoration Account-funded, Base Realignment and Closure Account-funded, and Operation and Maintenance accounts for the National Guard-funded sites. Using the attached template, each DoD Component shall report the following:

- Actual obligations to investigate and clean up PFAS through the end of FY 2018;
- Actual obligations to investigate and clean up PFAS in FY 2019;
- Planned obligations to investigate and clean up PFAS in FY 2020; and
- The estimated cost to investigate and clean up PFAS after FY 2020.

The completed template is due to my office by November 15, 2019. We will incorporate this reporting into the Environmental Management Review process and reevaluate the requirement annually to ensure we continue collecting the appropriate data. My point of contact is Ms. Deborah Morefield at 703-571-9067 or deborah.a.morefield.civ@mail.mil.

Robert H. McMahon

Attachment: As stated

¹ Currently there are only three PFAS – perfluorooctane sulfonate (PFOS), perfluorooctanoic acid (PFOA), and perfluorobutanesulfonic acid (PFBS) – with toxicity values that DoD can use to perform a baseline risk assessment and determine whether remedial action is needed under the federal cleanup law.

This list of installations with a known or suspected release of PFOS/PFOA is based on information as of December 31, 2016, and verified in July 2018.

Definitions:

1. An installation is a base, camp, post, station, yard, center, homeport facility for any ship, or other activity under the jurisdiction of the DoD, including any leased facility, that is located within the United States. Does NOT include FUDS or any facility used primarily for civil works, rivers and harbors projects, or flood control projects.
2. The investigation phases are PA, SI, and RI/FS.
3. The cleanup phases are IRA, RD, RA-C, and RA-O. Funding for removal actions and other mitigation activities (e.g., providing alternative drinking water) should be captured in the IRA phase.

Instructions:

1. For each installation, provide actual obligations through FY 2018, actual obligations in FY 2019, planned obligations in FY 2020, and the estimated cost after FY 2020 to investigate and clean up PFAS, as appropriate. Provide the funding separately for investigations and cleanup.
2. Base the estimated cost to investigate and clean up PFAS after FY 2020 on the information available to you as of the end of FY 2019.
3. Only include funding for investigating and cleaning up releases of PFAS caused by past DoD activities at Environmental Restoration Account-funded and BRAC Account-funded sites, and for investigating and cleaning up releases of PFAS caused by National Guard activities at Army Guard O&M-funded sites. Do not include funding for investigating and cleaning up other contaminants at sites where you are also investigating and cleaning up PFAS.
4. If you obligated/plan to obligate Environmental Restoration Account funding to conduct a PA and/or SI and Army Guard O&M funding to conduct additional investigations and/or cleanup at a National Guard facility, add a second row for that facility, update Column C to reflect the associated fund source, and report the cost data accordingly.
5. Installations with active and BRAC sites are listed twice; report Environmental Restoration Account funding and BRAC Account funding separately for these installations.
6. If you have obligated/will obligate Environmental Restoration Account, BRAC Account, or Army Guard O&M funds to investigate and/or clean up releases of PFAS at an installation that is not included in the list above, please insert that installation, along with the state/territory, fund source, and funding obligated/to be obligated at the bottom of the list.
7. For BRAC, include obligations of prior year funds and land sale revenue used/to be used for investigating and cleaning up PFAS.
8. Provide the funding in thousands of dollars (\$000).
9. Send the completed template to Alex Long (alexandria.d.long.civ@mail.mil) and Deb Morefield (deborah.a.morefield.civ@mail.mil) by November 15, 2019.

Definitions:

1. An installation is a base, camp, post, station, yard, center, homeport facility for any ship, or other activity under the jurisdiction of the DoD, including any leased facility, that is located within the United States. Does NOT include FUDS or any facility used primarily for civil works, rivers and harbors projects, or flood control projects.
2. The investigation phases are PA, SI, and RI/FS.
3. The cleanup phases are IRA, RD, RA-C, and RA-O. Funding for removal actions and other mitigation activities (e.g., providing alternative drinking water) should be captured in the IRA phase.

Instructions:

1. For each installation, provide actual obligations through FY 2018, actual obligations in FY 2019, planned obligations in FY 2020, and the estimated cost after FY 2020 to investigate and clean up PFAS, as appropriate. Provide the funding separately for investigations and cleanup.
2. Base the estimated cost to investigate and clean up PFAS after FY 2020 on the information available to you as of the end of FY 2019.
3. Only include funding for investigating and cleaning up releases of PFAS caused by past DoD activities at Environmental Restoration Account-funded and BRAC Account-funded sites, and for investigating and cleaning up releases of PFAS caused by National Guard activities at Air Guard O&M-funded sites. Do not include funding for investigating and cleaning up other contaminants at sites where you are also investigating and cleaning up PFAS.
4. If you obligated/plan to obligate Environmental Restoration Account funding to conduct a PA and/or SI and Air Guard O&M funding to conduct additional investigations and/or cleanup at a National Guard facility, add a second row for that facility, update Column C to reflect the associated fund source, and report the cost data accordingly.
5. Installations with active and BRAC sites are listed twice; report Environmental Restoration Account funding and BRAC Account funding separately for these installations.
6. If you have obligated/will obligate Environmental Restoration Account, BRAC Account, or Air Guard O&M funds to investigate and/or clean up releases of PFAS at an installation that is not included in the list above, please insert that installation, along with the state/territory, fund source, and funding obligated/to be obligated at the bottom of the list.
7. For BRAC, include obligations of prior year funds and land sale revenue used/to be used for investigating and cleaning up PFAS.
8. Provide the funding in thousands of dollars (\$000).
9. Send the completed template to Alex Long (alexandria.d.long.civ@mail.mil) and Deb Morefield (deborah.a.morefield.civ@mail.mil) by November 15, 2019.
