# Setting Up Your Microsoft PC for Telework

Getting your CAC reader setup on your personal computer is easy to do. With our recent move to the 16-digit Personal Identity Verification (PIV) for CAC login, middleware such as ActivClient is no longer required. Please follow these steps to install the DoD Root certificates on your home PC:
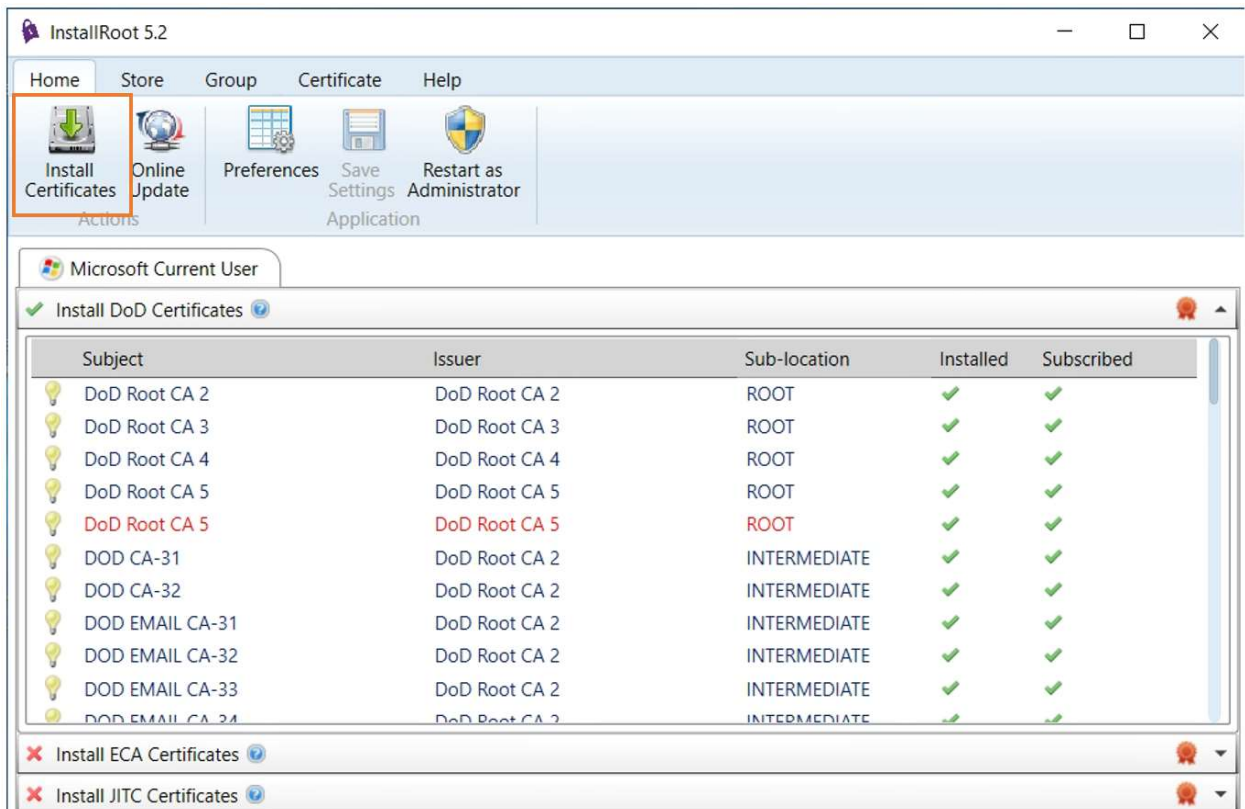

Download DoD Certificates for Windows

1. Download this file from the DoD Cyber Exchange Public website:
   https://dl.dod.cyber.mil/wp-content/uploads/pki-pke/msi/InstallRoot_5.5x32_NonAdmin.msi
2. Double-click the NonAdmin.msi file you downloaded.
3. Proceed through the InstallRoot Setup Wizard as follows:
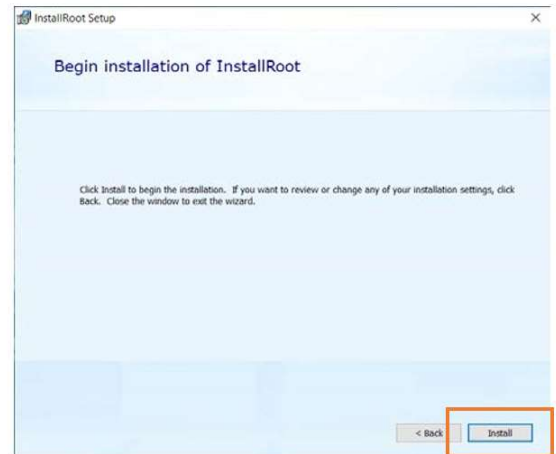

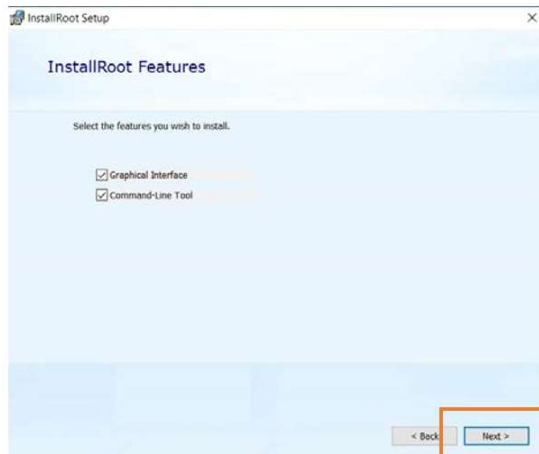

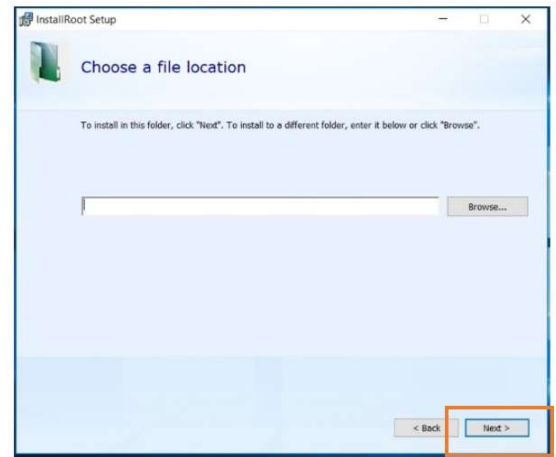

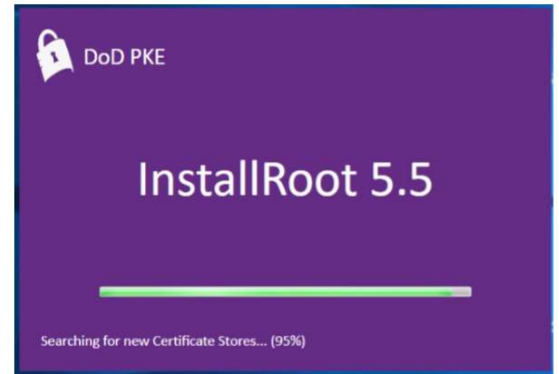

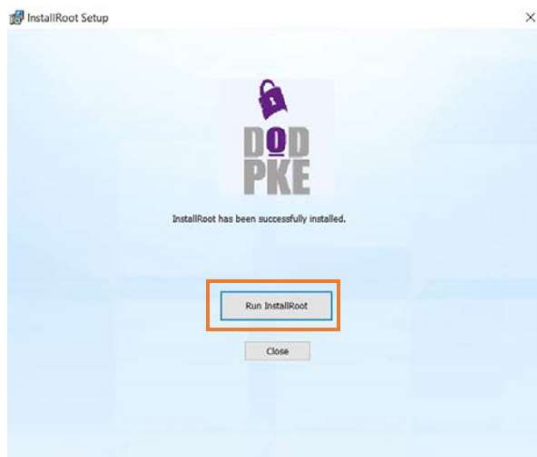

4. Click Install Certificates

5. This is all you need to access AF Outlook Web Access (OWA) at https://owa.us.af.mil and other DoD websites requiring CAC authentication from your home computer.
