

# Arnold Engineering Development Complex

## ***AEDC Early Reentry Screening Procedures***

**U.S. AIR FORCE**

# ***Underlying Information***

- **Process is intended to provide base access to those personnel required for mission critical activities but who have come in close contact with someone who has tested positive for COVID-19 who do not meet the entry criteria.**
- **Squadron level leaders have discretion to determine what tests/activities are determined to be “mission critical,” but are expected to appropriately weigh the need for the individuals presence on the installation against the risk that the virus could be transmitted to the rest of the workforce**
- **Early return must be voluntary on the part of the individual; leaders may not mandate that individuals return to the installation earlier than 14 days**
- **Early return procedures not required if individual has a negative COVID-19 PCR test within 48 hours. The test must be procured by the individual (the AF will not provide the testing)**
- **Individuals allowed to reenter early are expected to self monitor and report status to the authorizing leader during the remainder of the 14 day period (ex: if reentry authorized at day 10, the individual must monitor/report for an additional 4 days)**

# Early Reentry Decision Matrix

\* Necessary to avoid mission stoppage
