

SPARC

Creating Partnerships
Igniting Innovation

Scalable Partnerships Assessing Research Commercialization

The SPARC program is a partnership between the National Security Agency (NSA) and U.S. colleges and universities that uses student-led research to uncover the commercial potential of Agency-patented technologies.

Universities gain access to NSA technologies and innovators

Students get hands-on experience in agile product development practices

NSA gains target market research for licensing and commercializing their technology

Innovators experience lean startup methodologies

“Partnering with NSA has been a powerful addition to our compressed lean startup format. Our MBA students find it energizing and exciting to work with technologies and innovators from a federal laboratory.”

Rhonda Shrader,
Executive Director Entrepreneurship Program
University of California, Berkeley

SPARC Program Launch Partner
