Intrusive Investigation – Radiological Areas of Interest Installation Restoration Site 12 Former Naval Station Treasure Island

Work Will Be Performed
Between
June 7, 2021 and June 25, 2021

The Navy's contractor, Battelle, will be working at Former Naval Station Treasure Island within the Housing Area of IR Site 12 at seven radiological anomaly locations.

WHY IS WORK BEING DONE?	The Navy is investigating locations that potentially contain low level radioactive objects (LLROs) below the surface. If LLROs are found during the field activities, they will be removed.
WHAT WILL BE DONE?	<ul style="list-style-type: none"> • Gamma walkover surveys will be performed at each location. • Excavation will be performed in one-foot intervals with survey data collected at each depth. • If identified, LLROs will be removed and excavated soil will be surveyed and sampled. • Dust control and air monitoring will be implemented throughout the duration of work to prevent airborne particulates.
WHERE WILL IT BE DONE?	Work will be performed at seven locations in IR Site 12. See attached figure for the location of work areas.
HOW WILL IT IMPACT RESIDENTS?	Heavy equipment and field vehicles will be travelling between the work locations on nearby roads. Noise associated with excavation equipment and backup alarms is anticipated.
