

THE COMMANDANT OF THE UNITED STATES COAST GUARD
Washington, DC 20593

SUSTAINABILITY, ENVIRONMENTAL and ENERGY POLICY STATEMENT

The Coast Guard's diverse and far-reaching missions require efficiency, sustainability, and resilience. We will adapt to an increasingly dynamic environment to ensure Coast Guard continuity of operations. We will do so with consideration for Coast Guard stakeholders, both internal and external to our organization, and will continuously identify and leverage efficiencies that enhance and extend our operational reach.

We are dedicated to leading innovation that enhances American maritime safety, security, and economic prosperity in an increasingly complex world. We will increase resilience while addressing climate-induced risk. These efforts begin by safeguarding our own resources, reducing our logistical demands through conservation, and informing leadership decisions with known economic values and fiscal consequences.

The Coast Guard total workforce shall:

- Perform daily duties with a personal commitment to environmental protection and energy conservation.
- Enhance energy and infrastructure resilience to improve our readiness for manmade and natural disasters.
- Strive to reduce impacts on our missions from foreseeable environmental, energy, and climate change risks.
- View energy and environmental management solutions from both a Coast Guard and Departmental perspective to maximize efficiency and reduce impacts.
- Optimize investment to reduce environmental and energy risks to current and future operations.

I expect every member of our total workforce to remain vigilant in our commitment to the environment, sustainability, and energy conservation. We will continue to be model stewards of the environment.
