## **LIST OF ABBREVIATIONS AND ACRONYMS**

AMSR	Air Monitoring Summary Report
Cal/OSHA	California Occupational Safety and Health Administration
Cfm	cubic feet per minutes
CFR	Code of Federal Regulations
CTO	Contract Task Order
DCP	Dust Control Plan
EPA	United States Environmental Protection Agency
HPNS	Hunters Point Naval Shipyard
ITSI Gilbane	ITSI Gilbane Company
L/min	liters per minute
mg/m <sup>3</sup>	milligrams per cubic meter
Navy	U.S. Department of the Navy
NIOSH	National Institute for Occupational Safety and Health
PAH	polycyclic aromatic hydrocarbon
PEL	permissible exposure limit
PCB	polychlorinated biphenyl
PM10	particulate matter less than 10 microns in diameter
PUF	Polyurethane foam
SSHO	Site Safety and Health Officer
TWA	time-weighted average
ug/m <sup>3</sup>	micrograms per cubic meter

## **1.0 INTRODUCTION**

This Air Monitoring Summary Report (AMSR) was prepared by ITSI Gilbane Company (ITSI Gilbane) as requested by the United States Department of the Navy (Navy) under Radiological Environmental Multiple Award Contract N62473-10-D-0808, Contract Task Order (CTO) 0007.

This AMSR summarized the air monitoring activities conducted by ITSI Gilbane at Hunters Point Naval Shipyard (HPNS) in accordance with the Final Dust Control Plan (DCP), included as Appendix D to Hot Spot Delineation and Excavation Remedial Action Final Work Plan for Parcel E2, Hunters Point Naval Shipyard, San Francisco, California (ITSI Gilbane, 2014). This AMSR includes the air monitoring activities conducted between November 11<sup>th</sup>, 2014 and April 22<sup>nd</sup>, 2015, for the ongoing remediation activities in Parcel E-2; and describe the following:

- Where and how air monitoring samples were collected
- What test methods were used to analyze air monitoring samples
- How air monitoring data were evaluated

## **2.0 MONITORING SITE LOCATIONS**

Air monitoring stations were mobilized at one upwind and one downwind location from the work area. Based on past meteorological data, the prevalent wind direction at HPNS was from the west or west-southwest. Locations of the air monitoring stations are presented on Figure 1.

Air monitoring was performed to estimate and assess the impact of field activities. The location of air monitoring stations were determined based on the prevailing wind direction, and were modified as needed for accessibility consideration and worker safety. Wind direction was monitored daily using a wind sock. Atmospheric parameters were checked daily at [www.wunderground.com](http://www.wunderground.com) from station KCABRISB5 (see Table-2). Monitoring stations remained stationary while sampling was conducted.

Each monitoring station included four different monitoring systems:

1. Asbestos
2. Particulate matter less than 10 microns in diameter (PM10),
3. Total Suspended Particulates (TSP), which was also analyzed for arsenic, lead and manganese.

4. Polyurethane Foam (PUF), which was analyzed for either polychlorinated biphenyl (PCB) or polycyclic aromatic hydrocarbon (PAH).

## **3.0 ANALYTICAL METHODS**

### **3.1 Asbestos**

Asbestos was sampled and analyzed in accordance with National Institute for Occupational Safety and Health (NIOSH) Method 7400, from the *NIOSH Manual of Analytical Methods* (NIOSH, 1994). Method 7400 requires that samples were collected on three-piece cellulose ester filters fitted with conductive cowlings at a sampling rate of between 0.5 liters per minute (L/min) and 16 L/min. Each sample was collected over a period not to exceed 24 hours. Analytical results for Asbestos are summarized in Table 3

### **3.2 PM10**

PM10 was sampled in accordance with the EPA reference sampling method for PM10, described in 40 CFR 50, Subpart J. Each sample was collected on a filter over an approximately 24-hour period; the filter was then weighted to determine the amount of PM10 collected. Analytical results for PM10 are summarized in Table 4.

### **3.3 Total Suspended Particulates, Manganese, Arsenic and Lead**

TSP was sampled with a high-volume (39 to 60 cubic feet per minute [cfm]) air sampler in accordance with the U.S. Environmental Protection Agency (EPA) reference sampling method for TSP, described in Title 40 Code of Federal Regulations (CFR), Part 50, Subpart B. Each sample was collected on a filter over an approximately 24 hour period; the filter was then weighted to determine the amount of TSP collected. Once the filter weight was determined, the sample was analyzed for manganese and arsenic in accordance with one of the IO-3 methods identified in Compendium of Methods for the Determination of Inorganic Compounds in Ambient Air (EPA, 1999), and for lead in accordance with a modified EPA Method 12. The equipment specifications and sampling procedures have complied with the specifications provided in the regulations for the sampler, filter, accuracy, calibration, and quality assurance. Analytical results for TSP, manganese, arsenic and lead are summarized in Table 5

### **3.4 PCBs/PAHs**

PCBs were sampled and analyzed in accordance with EPA TO-4A. A high-volume (approximately 8 cfm) sampler was used to collect PCBs on a sampling cartridge containing polyurethane foam. The same sampler was used for collection of PAH samples and alternated between PCB and PAH samples, in accordance of the DCP. The sampler operated for an approximately 24-hour period, after which the

cartridge was returned to the laboratory for analysis. PAHs were sampled and analyzed in accordance with EPA TO-13A. Analytical results for PCBs and PAHs are summarized in Table 6.

#### **4.0 ANALYSIS OF AIR MONITORING DATA**

Analytical results from air monitoring samples were compared with the threshold criteria listed in Table 1. Construction and remediation activities conducted between November 11<sup>th</sup>, 2014 and April 22<sup>nd</sup>, 2015 did not result in the exceedances of the established threshold criteria.

#### **5.0 AIR MONITORING RESULTS**

Air monitoring results and weather information (including ambient pressure and temperature data) are summarized in Table 2 through Table 6.

## **TABLES**

**Table 1**  
**Air Monitoring Threshold Criteria**

Test Parameter	Threshold Criterion	Threshold Criteria Reference
TSP	0.5 mg/m <sup>3</sup>	Calculated action level for general dust and particulates
Manganese	200 ug/m <sup>3</sup>	Cal/OSHA PEL
Arsenic	10 ug/m <sup>3</sup>	Cal/OSHA PEL
Lead	50 ug/m <sup>3</sup>	Cal/OSHA PEL
PM10	5,000 ug/m <sup>3</sup>	California Ambient Air Quality Standard
Asbestos	0.1 fiber/cm <sup>3</sup>	Cal/OSHA PEL
PCBs	500 ug/m <sup>3</sup>	Cal/OSHA PEL
PAHs	200 ug/m <sup>3</sup>	Cal/OSHA PEL

Note:

Cal/OSHA = California Division of Occupational Safety and Health Administration

fiber/cm<sup>3</sup> = fiber per cubic centimeter

ug/m<sup>3</sup> = micrograms per cubic meter

mg/m<sup>3</sup> = milligrams per cubic meter

PEL = permissible exposure limit

TSP = total suspended particulates

PM10 = particulate matter less than 10 microns in diameter

PCB = polychlorinated biphenyl

PAH = polycyclic (polynuclear) aromatic hydrocarbon

**Table 2**  
**Ambient Pressure and Temperature Monitoring Results**

Sample Date	Ambient Pressure (in Hg)	Ambient Temperature (°F)
11/11/2014	29.86	58.5

Notes:

<sup>1</sup>Air sample was not collected on days with rain.<sup>2</sup>Generator breaker at MS#11 was tripped during sample collection on 11/17/14 and 4/21/15.

l/min = liters per minute

min = minutes

m<sup>3</sup> = cubic meters

mg = milligrams

mg/m<sup>3</sup> = milligrams per cubic meter

ug = micrograms

&lt; = below detection limit

Samples analyzed by ALS Environmental

Sample locations are shown on Figure 1

\* Filter damaged during shipment

J = estimated value

Notes:

<sup>1</sup>PUF sample was not collected on days with rain or on days when contaminated was not disturbed.<sup>2</sup>Generator breaker at MS#11 was tripped during sample collection on 11/17/14 and 4/21/2015.

PCB = polychlorinated biphenyl

PAH = polycyclic aromatic hydrocarbon

PUF samples are analyzed for PCBs and PAHs alternately on a daily basis.

Total PAHs and PCBs concentrations are calculated based on only detected results.

-- = did not collect sample

J = estimated value

l/min = liters per minute

min = minutes

m<sup>3</sup> = cubic meters

ug = micrograms

ug/m<sup>3</sup> = micrograms per cubic meter

&lt; = below detection limit
