EXSUM

The U.S. Air Force Medical Support to Future Fights Wargame was conducted by AFWI from 24-26 January 2023 in the Cleveland Building at Maxwell AFB, AL. This wargame was in support of the Air Force Medical Readiness Agency (AFMRA). The intent of the wargame was to test the capability and effectiveness of a new medical force presentation design concept in the Air Force Force Generation (AFFORGEN) model to support line of the Air Force (LAF) conducting agile combat employment (ACE) operations in a future fight scenario. Subject matter experts from across the Air Force medical community participated in the wargame. The participants were given two separate vignettes to test the new medical force design’s ability to provide medical support in a Pacific theater conflict. The wargame results were then analyzed to extract potential doctrine, organization, training, (existing) materiel, leadership and education, personnel, facilities, and policy (DOTmLPPF-P) mitigation strategies to identified capability gaps in Air Force medical capabilities and implications for the U.S. Air Force.
