## DEPARTMENT OF THE NAVY FISCAL YEAR (FY) 2024 BUDGET ESTIMATES

## JUSTIFICATION OF ESTIMATES MAR 2023

Military Construction Reserve Force (MCNR)

The estimated cost of this report for the Department of the Navy (DON) is \$6,773. The estimated total cost for supporting the DON budget justification material is approximately \$3,031,705 during the 2023 fiscal year. This includes \$197,379 in supplies and \$2,834,326 in labor.

### FY 2024 Military Construction, Navy and Marine Corps Reserve Program

### **Appropriation Language**

#### **SECTION 1 - APPROPRIATION LANGUAGE**

For construction, acquisition, expansion, rehabilitation, and conversion of facilities for the training and administration of the reserve components of the Navy and Marine Corps as authorized by Chapter 1803 of Title 10, United States Code, and Military Construction Authorization Acts, [\$27,747,000] \$51,291,000 to remain available until September 30, [2027] 2028. Provided, That, of the amount, not to exceed [\$2,590,000] \$6,495,000 shall be available for study, planning, design and architect and engineer services, as authorized by law, unless the Secretary of the Navy determines that additional obligations are necessary for such purposes and notifies the Committees on Appropriations of both Houses of Congress of the determination and the reasons therefor.

#### SECTION 2 - EXPLANATION OF LANGUAGE CHANGES

1. Deletion of FY 2023 appropriations shown in brackets.

## FY 2024 Military Construction, Navy and Marine Corps Reserve Program

## **Special Program Considerations**

#### POLLUTION ABATEMENT:

The military construction projects in this program will be designed to meet environmental standards. The Military construction projects proposed are primarily for the abatement of existing pollution problems at Naval and Marine Corps installations and have been reviewed to ensure that corrective design is accomplished in accordance with specific standards and criteria.

#### **ENERGY CONSERVATION:**

The military construction projects proposed in this program will be designed for minimum energy consumption.

#### FLOODPLAIN MANAGEMENT AND WETLANDS PROTECTION:

Proposed land acquisition, disposals, and installation construction projects have been planned to allow the proper management of floodplains and the protection of wetlands by avoiding long and short-term adverse impacts, reducing the risk of flood losses, and minimizing the loss or degradation of wetlands. Project planning is in accordance with the requirements of Executive Order Numbers 11988 and 11990.

#### DESIGN FOR ACCESSIBILITY OF PHYSICALLY HANDICAPPED PERSONNEL:

In accordance with Public Law 90-480, provisions for physically handicapped personnel will be provided for, where appropriate, in the design of facilities included in this program.

#### PRESERVATION OF HISTORICAL SITES AND STRUCTURES:

Facilities included in this program do not directly or indirectly affect a district, site, building, structure, object or setting listed in the National Register of Historic Places, except as noted on the DD Form 1391.

#### PLANNING IN THE NATIONAL CAPITAL REGION:

Projects located in the National Capital Region are submitted to the National Capital Planning Commission for budgetary review and comment as part of the commission's annual review of the Future Years Defense Program (FYDP). Construction projects within the District of Columbia, with the exception of the Bolling/Anacostia area, are submitted to the Commission for approval prior to the start of construction.

#### **ENVIRONMENTAL PROTECTION:**

In accordance with Section 102(2)(c) of the National Environmental Policy Act of 1969 (Public Law 91-190), the environmental impact analysis process has been completed or is actively underway for all projects in the military construction program.

#### ECONOMIC ANALYSIS:

Economics are an inherent aspect of project development and design of military construction projects. Therefore, all projects included in this program represent the most economical use of resources. Where alternatives could be evaluated, a primary economic analysis was prepared.

#### CONSTRUCTION CRITERIA MANUAL:

Project designs conform to Part II of Military Handbook 1190, "Facility Planning and Design Guide."

#### RESERVE MANPOWER POTENTIAL:

The reserve manpower potential to meet and maintain authorized strengths of all reserve flying/non-flying units in those areas in which these facilities are to be located has been reviewed. It has been determined, in coordination with the other services having reserve flying /non-flying units in these areas, that the number of units of the reserve components of the Armed Forces presently located in those areas, and those which have been allocated to the areas for futures activation, is not and will not be larger than the number that reasonably can be expected to be maintained at authorization strength considering the number of persons living in the areas who are qualified for membership in those reserve units.

#### 10. Description of Proposed Construction:

Constructs two low-rise Organic Storage Sheds with concrete slab on grade and sloped standing seam metal roof.

Constructs a vehicle wash platform with concrete slab on grade and preengineered steel building.

Facility-related control system include cybersecurity features in accordance with current DoD criteria.

This project will provide Antiterrorism (AT) features and comply with applicable service and Geographic Combatant Commander policies and

directive per UFC 4-010-01 DoD Minimum Antiterrorism Standard for Buildings. User Generated Unit Costs were used for this project and include the cost of features to meet the minimum DoD AT standards.

Special costs include Post Construction Contract Award Services (PCAS), cybersecurity, commissioning, geospatial mapping, and third-party commissioning. The cybersecurity commissioning cost is to cover the contractor's submittals, administrative actions and compliance with Navy's cybersecurity requirements as well as Navy in-house costs to review contractor submittals and to implement steps necessary for obtaining Authority to Operate. Special costs also include a premium acquisition cost for early contractor involvement.

Department of Defense and Department of the Navy principles for high performance and sustainable building requirements will be included in the design and construction of the project in accordance with federal laws and Executive Orders. Low Impact Development will be included in the design and construction of this project as appropriate.

Site preparation includes clearing, grading, erosion control and site demolition.

Paving and site improvements include paved parking areas for approximately 410 privately owned vehicles, concrete tactical vehicle parking, curbs, ramps, gutters, sidewalks, landscaping, refueling area, and dumpster/recycling enclosure.

Physical Security items include security fencing and gates.

Electrical utilities include primary and secondary distribution systems, lighting, transformers and telecommunication infrastructure.

Mechanical utilities include water lines, storm water drainage systems, sanitary sewer lines and natural gas lines.

Environmental mitigation includes wetland impact measures.

This project demolishes Building 421 (763 m2), Building 423 (1,016 m2), Building 505 (942 m2), and Building 513 (376 m2), as well as two miscellaneous sheds (7 m2 and 22 m2). These facilities will be demolished to clear the site for this project.

Facilities will be designed to meet, or exceed, the useful service life

specified in the Unified Facilities Criteria. Facilities will incorporate							
features that provide the lowest practical life-cycle cost solutions that							
satisfy the facility requirements, with the goal of maximizing energy							
efficiency.							

#### 11. Requirement: $\underline{1190} \, \underline{m2}$ Adequate: Substandard:

#### PROJECT:

Constructs two organic supply buildings and vehicle wash platform. This project also removes four buildings and two miscellaneous sheds from the existing site.

(Current Mission)

#### REOUIREMENT:

The project is required and necessary to provide adequate facilities in support of 6th Engineer Support Units, Det. 1 H&S Company, Engineer Support Company and "A" Company, 1st Battalion 24th Marines, their equipment, active duty personnel and drilling reserve personnel assigned to MCRC Battle Creek.

The organic storage buildings are essential to support training and operations of assigned U.S. Marine Corps Forces Reserve (MARFORRES)units that are routinely activated. The buildings will be a part of a Reserve Center to serve as the single gathering point for personnel for administrative meetings and drill weekends. It also becomes the initial mobilization location during federal activation of Reserve component units.

#### CURRENT SITUATION:

The current facilities at MCRC Battle Creek are aged, failing and undersized for the assigned units. In order to support the recent consolidations of the Grand Rapids and Battle Creek units, significant and expensive short and long-term investments would be required to mitigate existing facility deficiencies at the current Battle Creek site. The condition and age of the current Battle Creek facilities do not support further recapitalization repair and modernization actions to include added footprint of existing facilities.

This project is not within a flood hazard area.

This project does not have scope elements above and beyond the Unified Facilities Criteria and Facilities Criteria regarding adverse long-term environmental effects.

#### IMPACT IF NOT PROVIDED:

If this project is not provided, the Marines assigned to MCRC Battle Creek, Michigan will remain in old, inadequate and failing facilities that do not

meet operational space requirements. Life, health and safety standards will not be met. Unit mission readiness will be negatively impacted.

Equipment that is stored outside without overhead protection will be under constant exposure to the elements suffer undue wear, tear, and accelerated deterioration, requiring continual costly maintenance. The infrastructure conditions limit MARFORRES ability to correct life, safety and code compliance issues. Maintaining the current facilities requires continued expenditure of limited facilities sustainment funding.

#### 10. Description of Proposed Construction:

Constructs a steel framed building with a concrete foundation, reinforced concrete floors with a grounding grid system, and metal stud insulated interior walls, metal doors with hardware, metal insulated roofing system, special ground mobile radar maintenance bay with electrical and communication utilities for the radar equipment, supply and storage area, a secure room, fire alarm and protection systems, heating, venting and air conditioning systems, electrical systems, communication and electronic security systems.

This project will provide Antiterrorism features and comply with regulations and physical security mitigation in accordance with DoD Minimum Antiterrorism Standards for Buildings.

Built-in equipment includes a fire protection booster pump.

Special cost includes Post Construction Contract Award Services (PCAS), cybersecurity commissioning, and geospatial survey and mapping.

Operations and Maintenance Support Information (OMSI) is included in this project.

Department of Defense and Department of the Navy principles for high performance and sustainable building requirements will be included in the design and construction of the project in accordance with federal laws and Executive Orders. Low Impact Development will be included in the design and construction of this project as appropriate.

Demolition includes Building 922 and associated foundation and utilities.

Facilities will be designed to meet or exceed the useful service life specified in DoD Unified Facility Criteria. Facilities will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirements with the goal of maximizing efficiency energy.

As an additional flood mitigation measure the reserve radar building will be designed to have an increased flooring elevation of 24 inches in elevation above the existing facilities (i.e. floor finish of Building 922). The facility will be constructed to avoid flood hazards to the electrical and mechanical systems within the facility.

## 11. Requirement: $\underline{790}$ Adequate: Substandard:

#### PROJECT:

This project constructs a four radar maintenance bays and two reinforced concrete equipment pads with utilities and grounding systems at the Marine Corps Reserve radar site. The existing building 922 will be demolished.

#### (Current Mission)

#### REOUIREMENT:

In support of the MARFORRES mission to prepare and provide units and individual Marines to augment and reinforce the active component, this project is required to provide the Marine Radar Training Center (MRTC's)

adequate and efficiently configured space for maintenance of multiple G/ATOR's located at the Dam Neck reserve center, VA.

#### CURRENT SITUATION:

G/ATOR radar maintenance facilities do not currently exist at the Dam Neck, Virginia Beach, VA. Existing paved radar equipment training pads fail to meet the power and cover requirements for staging and maintenance area for the newly acquired G/ATOR radar equipment to be delivered to the Marine Corps Reserve Center at Dam Neck, Virginia Beach, VA.

#### IMPACT IF NOT PROVIDED:

Failure to construct this facility for the new radar equipment will adversely impact the maintenance schedules which will incur additional costs and require unnecessary expenditure of limited facilities sustainment funds.

#### PROJECT:

Planning and design funds.

(Current Mission)

#### REQUIREMENT:

All projects in a military construction program presented for approval must be based on sound engineering and the best cost data available. For this reason, design is initiated to establish project estimates in advance of program submittal to the Congress. Based on this preliminary design, final plans and specifications are then prepared. These costs for architectural and engineering services and construction design are not provided for in the construction project cost estimates except in those where Design/Build contracting method is used.

#### 10. Description of Proposed Construction:

Department of the Navy (DON) unspecified minor military construction (UMC) projects authorized by Title 10 USC 18233(a) and funded by military construction reserve force (MCNR) appropriations.

#### 11. Requirement:

#### PROJECT:

DON UMC projects funded by MCNR appropriations.

(Current Mission)

#### REQUIREMENT:

A MCNR funded UMC project is a military construction project not otherwise authorized by law having an approved total funded project cost within limits identified for such projects in Title 10 USC 18233(a). A MCNR funded UMC project may be carried out only after the end of the 14 day period beginning on the date on which notification is provided in an electronic medium to the appropriate committees of Congress.
