1.0 Introduction

Aptim Federal Services, LLC (APTIM) is providing environmental remediation services to the U.S. Department of the Navy under the Radiological Environmental Multiple Award Contract, Contract Number N62473-17-D-0006, Contract Task Order N6247318F5065. APTIM is performing air sampling of fugitive dust emissions in support of Parcel G removal activities in accordance with the Final, Revision 1, Dust Management and Air Monitoring Plan (DMP) (included as Appendix E of the *Final, Revision 1, Parcel G Removal Site Evaluation Work Plan Addendum, Hunters Point Naval Shipyard, San Francisco, California* [APTIM, 2020]). The DMP describes procedures to reduce fugitive dust during work activities and outlines air sampling procedures to ensure these procedures are effective. Air sampling ensures on-site worker safety and provides reasonable assurance of the protection of the surrounding residents and public receptors.

This summary report describes the following:

- Where and how air samples are collected
- What test methods are used to analyze air samples
- How air sampling data are evaluated

This summary report presents the air sampling analytical results from August 24, 2020 through May 11, 2023, and compares the results with the established action levels included in the DMP (APTIM, 2020 [Appendix E]).

2.0 Sampling Site Locations

Air sampling stations were mobilized to collect air samples upwind and downwind of work areas for the duration of the project. The predominant wind direction at former Hunters Point Naval Shipyard is from the west or west-northwest. Figure 1 shows locations of air sampling stations and predominant wind direction. For the fieldwork performed during this period, APTIM used two upwind sampling locations and three downwind sampling locations marked as follows:

- “Air Sampling Station 1 (upwind)”
- “Air Sampling Station 1A (upwind)”
- “Air Sampling Station 17 (downwind)”
- “Air Sampling Station 17A (downwind)”
- “Air Sampling Station 18 (downwind)”

The upwind air sampling stations 1 and 1A and the downwind air sampling stations 17, 17A, or 18 were used based on the location of fieldwork. One upwind sampling station and one downwind sampling station was in use at a time. A windsock installed on site was used to show wind direction and weather forecasts were checked daily at www.noaa.gov. Sampling stations remained stationary while sampling was conducted. Each sampling station included four separate air sampling systems for the following:

- Total suspended particulates (TSP) and metals (lead and manganese)
- Particulate matter larger than 10 microns in size (PM10)
- Asbestos
- Radionuclides of concern (ROCs)

3.0 Analytical Methods

TSP, Lead, and Manganese: TSP samples were collected with a high-volume (39 to 60 cubic feet per minute) air sampler in accordance with U.S. Environmental Protection Agency's (EPA's) reference sampling method for TSP, described in Title 40 Code of Federal Regulations, Part 50, Appendix B. Each sample was collected on a filter over the course of a period not to exceed 25 hours; the filter was then weighed to determine the amount of TSP collected. Once the amount of TSP was determined, the sample was analyzed for lead and manganese in accordance with one of the IO-3 methods identified in the *Compendium of Methods for the Determination of Inorganic Compounds in Ambient Air* (EPA, 1999). The equipment specifications and sampling procedures used, including the sampling apparatus, filters, equipment accuracy, equipment calibration, and quality assurance checks conformed to those specified in the analytical method. The TSP high-volume samplers were calibrated using a National Institute of Standards and Technology (NIST)-traceable flow controller to 40.0 cubic feet per minute on a monthly basis and flowrates were recorded daily and adjusted as needed to maintain the flowrates.

PM10: Air samples were collected and analyzed for PM10 in accordance with EPA's reference sampling method for PM10, described in 40 Code of Federal Regulations Part 50, Appendix J. Each sample was collected on a filter over the course of a period not to exceed 25 hours; the filter was then weighed to evaluate the concentrations of PM10 in ambient air. The PM10 high-volume samplers were calibrated using a NIST-traceable flow controller to 40.0 cubic feet per minute on a monthly basis and flowrates were recorded daily and adjusted as needed to maintain flowrates.

Asbestos: Air samples were collected and analyzed for asbestos in accordance with the National Institute for Occupational Safety and Health Method 7400, in the *NIOSH Manual of Analytical Methods* (1994). Method 7400 requires that samples be collected on three-piece cellulose ester filters, which are fitted with conductive cowlings, at a sampling rate of between 0.5 liter per minute and 16 liters per minute. Each sample was collected on a filter over the course of a period not to exceed 25 hours. The GilAir Plus pumps were calibrated using a NIST-traceable flow controller to 2.0 liters per minute on a monthly basis, and flowrates were recorded daily and adjusted as needed to maintain flowrates.

ROCs: Air samples were collected and analyzed for ROCs to demonstrate dust management controls were protective of worker health and public health for off-site

receptors. Radiological air samples were collected using low-volume air samplers, F&J Specialty Products, Inc. Model LV-1D over 104 hours (Monday morning to Friday afternoon) to achieve the sample volume required to provide minimum detectable activities below the action levels. The samples were analyzed at the off-site laboratory for Gamma Spectroscopy (EPA 901.1/DOE EML HASL-300), gas flow proportional counting (EPA Method 905.0), and Alpha Spectroscopy.

4.0 Analysis of Air Sampling Data

Analytical results from air sampling samples were compared with the action levels listed in Table 4-1 and in accordance with the DMP (APTIM, 2020 [Appendix E]).

Table 4-1: Air Sampling Action Levels

Test Parameters	Action Level	Basis
PM10	50 µg/m ³	DTSC HERO developed action level (residents and public receptors) ^a
	5,000 µg/m ³ ^b	Cal/OSHA PEL (on-site workers)
TSP	500 µg/m ³	Basewide HPNS level chosen to minimize overall permissible dust release from sites (on-site workers)
Lead	50 µg/m ³	Cal/OSHA PEL (on-site workers)
Manganese	200 µg/m ³	Cal/OSHA PEL (on-site workers)
Asbestos	0.1 fiber/cm ³	Cal/OSHA PEL (on-site workers)
Cesium-137	4.00E-11 µCi/mL	10 CFR, Part 20, Appendix B, Table 2 Column 1 adjusted from 50 mrem per year to a maximum annual exposure of 10 mrem per year at the receptor (public receptor) ^c
Plutonium-239	4.00E-15 µCi/mL	
Radium-226	1.80E-13 µCi/mL	
Strontium-90	1.20E-12 µCi/mL	
Thorium-232	1.20E-15 µCi/mL	
Uranium-235	6.00E-13 µCi/mL	

Notes:

- ^a The DTSC HERO action level is based on the CSAAQS. The CSAAQS is designed to protect the general public from airborne particulates generated in the urban, suburban, and rural environments. The CSAAQS is not meant to be applied to general project-specific construction actions and related air quality. Rather, the standard is used to attain city- or regional-wide ambient air quality goals for the benefit of the general public. The current CSAAQS for PM10 is 50 µg/m³ average per 24-hour day. The City and County of San Francisco is currently a non-attainment area for the CSAAQS for PM10.
- ^b Cal/OSHA PEL for particulates not otherwise regulated (respiratory) used for PM10.
- ^c Results may be evaluated using 40 CFR Appendix E to Part 61 to demonstrate compliance with the National Emission Standards for Hazardous Air Pollutants (40 CFR Part 61).

µCi/mL microcurie per milliliter (activity)
 µg/m³ microgram per cubic meter
 Cal/OSHA California Occupational Safety and Health Administration
 CFR Code of Federal Regulations
 CSAAQS California State ambient air quality standard

DTSC	California Department of Toxic Substances Control
fiber/cm ³	fiber per cubic centimeter
HERO	Human and Ecological Risk Office
HPNS	former Hunters Point Naval Shipyard
mrem	millirem
PEL	permissible exposure limit
PM10	particulate matter smaller than 10 microns in diameter
TSP	total suspended particulates

5.0 Air Sampling Results

The tables included as Attachment 1 present weather information (including ambient pressure and temperature data) and air sampling results. Air sampling data were collected from the upwind sampling station and downwind sampling station (Section 2.0). Table 5-1 lists each interim air sampling report and the dates covered in each report.

Table 5-1: Air Sampling Report Summary

Interim Report Number	New Data Date Range
001	08/24/20–09/11/20
002	09/14/20–09/25/20
003	09/28/20–12/05/20
004	12/07/20–02/05/21
005	02/08/21–02/16/21
006	05/24/21–06/11/21

012	07/05/22–07/28/22
013	08/01/22–09/01/22
014	09/06/22–09/29/22
015	10/03/22–12/22/22
016	04/11/23–05/11/23

5.1 Report 001

There were no site-related exceedances above air sampling threshold criteria and action levels during this reporting period.

There were PM10 exceedances (above 50 micrograms per cubic meter [$\mu\text{g}/\text{m}^3$]) in both upwind and downwind samples on August 28, September 9, September 10, and September 11, 2020. PM10 concentrations were unusually high due to forest fires near the area and not related to site activities.

A summary of air sampling station downtime for the reporting period is as follows:

- August 24, 2020—The TSP sampler at the downwind air sampling station was down for approximately 1 hour. The generator was repaired on August 24 and replaced on August 25.
- August 27, 2020—While conducting daily filter changeouts, the air sampling technician noticed the upwind generator was shut off due to low fuel. The duration of shut off time is unknown. Generator was refueled and sampling was restarted at 0805.
- September 2, 2020—Downwind station was shut off for 15 minutes, from approximately 0830 to 0845. The generator exhaust was re-positioned downwind from the samplers to minimize pollutant contamination from the exhaust.
- September 8, 2020—Downwind sampling was shut off for approximately 1 hour, from 0922 to 1022. The station was relocated to Air Sampling Station 17A.

5.2 Report 002

There were no site-related exceedances above air sampling threshold criteria and action levels during this reporting period.

There was a PM10 exceedance (above $50 \mu\text{g}/\text{m}^3$) in the downwind sample on September 14, 2020. PM10 concentrations were unusually high due to forest fires near the area and not related to site activities. The upwind sample from that day contributed $48.6 \mu\text{g}/\text{m}^3$ and the downwind sample was $88.4 \mu\text{g}/\text{m}^3$; the site-related PM10 concentration was $39.8 \mu\text{g}/\text{m}^3$.

A summary of air sampling station downtime for the reporting period is as follows:

- September 16, 2020—The downwind sampling station was down for one hour while replacing the generator.
- September 18, 2020—The upwind sampling station was down for approximately 0.75 hours while replacing the generator.
- September 25, 2020—The upwind sampling station was down for approximately four hours due to a generator malfunction. The new generator was brought on site, and the upwind air sampling station returned to service at 1119.

5.3 Report 003

There were PM10 exceedances above the California Department of Toxic Substances Control (DTSC) Human and Ecological Risk Office (HERO) developed action level ($50 \mu\text{g}/\text{m}^3$) on the following dates (Attachment 1, Table 3):

- October 1, 2020 (upwind and downwind)
- October 2, 2020 (upwind and downwind)
- October 6, 2020 (upwind)
- October 15, 2020 (upwind and downwind)
- October 23, 2020 (upwind and downwind)
- October 28, 2020 (upwind)
- November 16, 2020 (upwind)
- November 21, 2020 (downwind)
- December 3, 2020 (upwind and downwind)
- December 4, 2020 (upwind and downwind)
- December 5, 2020 (upwind and downwind)

Air sampling results are subtracted based on predominant wind direction when wind speeds are greater than 5 miles per hour (mph). Attachment 2 presents a summary of the subtraction criteria. Based on wind direction and wind speed, site-related PM10 concentrations were below the $50 \mu\text{g}/\text{m}^3$ action level on October 2, 2020, October 6, 2020, October 23, 2020, and October 28, 2020.

In early October, PM10 concentrations were unusually high due to forest fires near the area and not related to site activities. PM10 results above the DTSC HERO developed action level ($50 \mu\text{g}/\text{m}^3$) on October 1, 2020, were not related to site activities. The regional concentration of particulate matter larger than 2.5 microns in size (PM2.5), measured at the Bay Area Air Quality Management District (BAAQMD) Arkansas Street Station, was also elevated at $130 \mu\text{g}/\text{m}^3$, according to the BAAQMD website. Elevated results on this day are not related to site activities.

On October 15, 2020, PM10 results were above the DTSC HERO developed action level ($50 \mu\text{g}/\text{m}^3$) at both the upwind and downwind air sampler locations ($89.1 \mu\text{g}/\text{m}^3$ and

79.7 $\mu\text{g}/\text{m}^3$, respectively). Wind speed was below 5 mph and the wind direction was north (Attachment 1, Table1).

On November 16, 2020, the upwind result was 63.8 $\mu\text{g}/\text{m}^3$, above the 50 $\mu\text{g}/\text{m}^3$ action level; however, the downwind result was below the action level (34.5 $\mu\text{g}/\text{m}^3$). Wind speed was below 5 mph and the wind direction was south-southeast (Attachment 1, Table1).

On November 21, 2020, the downwind PM10 result was 76 $\mu\text{g}/\text{m}^3$, above the 50 $\mu\text{g}/\text{m}^3$ action level. Wind speed was below 5 mph and the wind direction was northeast (Attachment 1, Table1).

In accordance with the DMP (APTIM, 2020 [Appendix E]), dust (measured as PM10) is also monitored in real-time using DustTrak™ monitors. Although the PM10 filter-based air sample results, analyzed at the off-site laboratory, were above the DTSC HERO developed action level (50 $\mu\text{g}/\text{m}^3$), the average daily real-time dust monitoring results (DustTrak™ results) were below the DTSC action level on October 15, November 16, and November 21, 2020.

On December 3, 4, and 5, 2020, site PM10 results ranged from 51 to 74 $\mu\text{g}/\text{m}^3$ from both upwind and downwind air sampler locations. Wind speed ranged from 0.9 to 2 mph, and the wind direction was northeast or south (Attachment 1, Table 1). Regional concentrations of PM2.5, measured at the BAAQMD Arkansas Street Station, were also elevated, and ranged from 62 to 69 $\mu\text{g}/\text{m}^3$, according to the BAAQMD website. The PM2.5 regional data suggests the elevated results on these days were not related to site activities.

A summary of air sampling station downtime for the reporting period is as follows:

- October 13, 2020—The downwind air sampling station was offline from 0745 to 0928 (approximately 1.5 hours). The Parcel G radiologically controlled area was expanded, and the air sampling station was moved to the other side of the fence to keep the station outside the radiologically controlled area. The station was relocated less than 10 meters.
- October 19, 2020—The downwind air sampling station 17A was offline from approximately 0800 to 0820 for generator maintenance.
- December 3, 2020—The upwind air sampling station 1 was offline from approximately 0707 to 0720 (13 minutes) and the downwind air sampling

station 18 was offline from approximately 0734 to 0752 (18 minutes) for generator maintenance.

5.4 Report 004

There were PM10 exceedances above the DTSC HERO developed action level ($50 \mu\text{g}/\text{m}^3$) on the following dates (Attachment 1, Table 3):

- December 8, 2020 (upwind)
- December 9, 2020 (upwind and downwind)
- January 19, 2021 (upwind and downwind)
- January 20, 2021 (upwind and downwind)
- January 21, 2021 (upwind)
- February 5, 2021 (upwind)

Air sampling results are subtracted based on predominant wind direction when wind speeds are greater than 5 mph. Based on wind direction and wind speed, site-related PM10 concentrations were not subtracted for the listed dates.

On December 8, 2020, the upwind result was above the $50 \mu\text{g}/\text{m}^3$ action level and the downwind result was below the action level ($63.9 \mu\text{g}/\text{m}^3$ and $32.3 \mu\text{g}/\text{m}^3$, respectively). Wind speed was below 5 mph and the wind direction was northeast (Attachment 1, Table 1). In accordance with the DMP (APTIM, 2020 [Appendix E]), dust (measured as PM10) is also monitored in real-time using DustTrak™ monitors. Although the PM10 filter-based air sample result, analyzed at the off-site laboratory, was above the DTSC HERO developed action level ($50 \mu\text{g}/\text{m}^3$), the average daily real-time dust monitoring results (DustTrak™ results) were below the DTSC action level on December 8, 2020.

On December 9, 2020, PM10 results were above the DTSC HERO developed action level ($50 \mu\text{g}/\text{m}^3$) at both the upwind and downwind air sampler locations ($90.5 \mu\text{g}/\text{m}^3$ and $64.0 \mu\text{g}/\text{m}^3$, respectively). Wind speed was below 5 mph and the wind direction was south-southwest (Attachment 1, Table 1). Regional concentrations of PM2.5, measured at the BAAQMD Arkansas Street Station, were also elevated on December 9, 2020 ($78 \mu\text{g}/\text{m}^3$) according to the BAAQMD website. The PM2.5 regional data suggests the elevated results on this day may not be related to site activities.

On January 19, 2021, PM10 results were above the DTSC HERO developed action level ($50 \mu\text{g}/\text{m}^3$) at both the upwind and downwind air sampler locations ($50.8 \mu\text{g}/\text{m}^3$ and $73.7 \mu\text{g}/\text{m}^3$, respectively). Wind speed was 15.4 mph and the wind direction was north-northeast (Attachment 1, Table 1). Although the PM10 filter-based air sample results, analyzed at the off-site laboratory, were above the DTSC HERO developed action level ($50 \mu\text{g}/\text{m}^3$), the average daily real-time dust monitoring results (DustTrak™ results) were below the DTSC action level on January 19, 2021.

On January 20, 2021, PM10 results were above the DTSC HERO developed action level ($50 \mu\text{g}/\text{m}^3$) at both the upwind and downwind air sampler locations ($81.3 \mu\text{g}/\text{m}^3$ and $62.2 \mu\text{g}/\text{m}^3$, respectively). Wind speed was below 5 mph and the wind direction was south (Attachment 1, Table 1). Regional concentrations of PM2.5, measured at the BAAQMD Arkansas Street Station, were also elevated on January 20, 2021 ($57 \mu\text{g}/\text{m}^3$) according to the BAAQMD website. The PM2.5 regional data suggests the elevated results on this day may not be related to site activities.

On January 21, 2021, the upwind result was above the $50 \mu\text{g}/\text{m}^3$ action level and the downwind result was below the action level ($71.2 \mu\text{g}/\text{m}^3$ and $35.5 \mu\text{g}/\text{m}^3$, respectively). Wind speed was below 5 mph and the wind direction was southwest (Attachment 1, Table 1). Although the PM10 filter-based air sample results, analyzed at the off-site laboratory, were above the DTSC HERO developed action level ($50 \mu\text{g}/\text{m}^3$), the average daily real-time dust monitoring results (DustTrak™ results) were below the DTSC action level on January 21, 2021.

On February 5, 2021, the upwind result was above the $50 \mu\text{g}/\text{m}^3$ action level and the downwind result was below the action level ($51.0 \mu\text{g}/\text{m}^3$ and $17.0 \mu\text{g}/\text{m}^3$, respectively). Wind speed was below 5 mph and the wind direction was west-southwest (Attachment 1, Table 1). Although the PM10 filter-based air sample results, analyzed at the off-site laboratory, were above the DTSC HERO developed action level ($50 \mu\text{g}/\text{m}^3$), the average daily real-time dust monitoring results (DustTrak™ results) were below the DTSC action level on February 5, 2021.

There were thorium-232 (^{232}Th) exceedances above the action limit ($1.20\text{E}-15$ microcurie per milliliter [$\mu\text{Ci}/\text{mL}$]) in the upwind and downwind samples collected between December 21 and December 22, 2020. The upwind sample result was $1.97 \text{E}-15 \mu\text{Ci}/\text{mL } ^{232}\text{Th}$, and the downwind sample result was $1.29\text{E}-15 \mu\text{Ci}/\text{mL } ^{232}\text{Th}$ (Attachment 1, Table 5). Wind speed on these dates ranged from 3.8 to 4.3 mph and the wind direction was north-northeast (Attachment 1, Table 1). The samples had a

shorter duration (27 hours versus typical 104 hours) due to the site shutting down for weather between December 23, 2020 and January 4, 2021. Shorter sample durations equate to smaller sample volumes. The shorter sample durations increase total uncertainty in the measurement which may bias the sample results. Additionally, ^{232}Th was detected in the field blank sample from this week above the action limit at $1.92\text{E-}15$ $\mu\text{Ci/mL } ^{232}\text{Th}$ (Table 6-4). Field blank filter sample results have ranged from $5.26\text{E-}17$ to $1.92\text{E-}15$ $\mu\text{Ci/mL } ^{232}\text{Th}$ (Table 6-4) between August 24, 2020 and February 5, 2021. Air samples are collected on glass fiber filters, which may contain naturally occurring radioactive material (NORM). The ^{232}Th detections in the field blank samples, coupled with the low ^{232}Th results, suggest these exceedances may be due to NORM background in the sample filter media. Communications with the laboratory have also confirmed many filter media contain small amounts of NORM, and further investigation relative to the background of current filters in use is in progress.

A summary of air sampling station downtime for the reporting period is as follows:

- December 17, 2020—Upwind TSP air sampler was offline for approximately 2 hours from 1000 to 1210.
- December 23, 2020-January 1, 2021—Air sampling not performed because the site was shut down due to weather conditions or holidays, and no workers were on site.
- January 4, 2021—Air sampling not performed due to rain.
- January 6, 2021—Air sampling performed for half the day (morning) due to rain.
- January 26, 2021-February 3, 2021—Air sampling not performed because the site was shut down due to weather conditions, and no workers were on site. Workers were on site February 4 and 5, 2021, for storm damage repairs only.

5.5 Report 005

There were PM₁₀ exceedances above the DTSC HERO developed action level ($50 \mu\text{g}/\text{m}^3$) on the following dates (Attachment 1, Table 3):

- February 11, 2021 (upwind)
- February 16, 2021 (upwind)

On February 11, 2021, the upwind result was above the $50 \mu\text{g}/\text{m}^3$ action level and the downwind result was below the action level ($66.5 \mu\text{g}/\text{m}^3$ and $9.7 \mu\text{g}/\text{m}^3$, respectively).

Wind speed was below 5 mph and the wind direction was south-southwest (Attachment 1, Table 1). Although the PM10 filter-based air sample results, analyzed at the off-site laboratory, were above the DTSC HERO developed action level ($50 \mu\text{g}/\text{m}^3$), the average daily real-time dust monitoring results (DustTrak™ results) were below the DTSC action level on February 11, 2021.

On February 16, 2021, the upwind result was above the $50 \mu\text{g}/\text{m}^3$ action level and the downwind result was below the action level ($74.8 \mu\text{g}/\text{m}^3$ and $19.6 \mu\text{g}/\text{m}^3$, respectively). Wind speed was below 5 mph and the wind direction was southwest (Attachment 1, Table 1). Although the PM10 filter-based air sample results, analyzed at the off-site laboratory, were above the DTSC HERO developed action level ($50 \mu\text{g}/\text{m}^3$), the average daily real-time dust monitoring results (DustTrak™ results) were below the DTSC action level on February 16, 2021.

A summary of air sampling station downtime for the reporting period is as follows:

- February 15, 2021—No air sampling due to rain conditions.

5.6 Report 006

There were no site-related exceedances above air sampling threshold criteria and action levels during this reporting period.

A summary of air sampling station downtime for the reporting period is as follows:

- May 24, 2021—Air sampling was initiated in the afternoon to check for calibration; no asbestos sample was collected. The project remobilized on May 24, 2021, and there were no field activities during the day.

5.7 Report 007

There were PM10 exceedances above the DTSC HERO developed action level ($50 \mu\text{g}/\text{m}^3$) on the following dates (Attachment 1, Table 3):

- June 18, 2021 (upwind and downwind)
- June 21, 2021 (downwind)
- July 9, 2021 (upwind)

Air sampling results are subtracted based on predominant wind direction when wind speeds are greater than 5 mph. Attachment 2 presents a summary of the subtraction criteria. Based on wind direction and wind speed, site-related PM10 concentrations were not subtracted for the listed dates.

On June 18, 2021, both the upwind and downwind results were above the action level ($72.6 \mu\text{g}/\text{m}^3$ and $65.9 \mu\text{g}/\text{m}^3$, respectively), indicating potential off-site interferences. Wind speed was 7.4 mph and the wind direction was west (Attachment 1, Table 1), so results were not subtracted. While the PM10 filter-based air sample results, analyzed at the off-site laboratory, were above the DTSC HERO developed action level ($50 \mu\text{g}/\text{m}^3$), the average daily real-time dust monitoring results (DustTrak™ results) were below the DTSC action level. The BAAQMD issued “Spare the Air” advisories for PM2.5 on June 17 and June 18. The closest BAAQMD Air Monitor at San Francisco-Arkansas Street had a daily average PM2.5 result of $64 \mu\text{g}/\text{m}^3$ on June 18, 2021.

On June 21, 2021, the upwind result was below the action level and the downwind result was above the action level ($16.7 \mu\text{g}/\text{m}^3$ and $122 \mu\text{g}/\text{m}^3$, respectively). Wind speed was 6.7 mph and the wind direction was west-southwest (Attachment 1, Table 1), so results were not subtracted. Although the PM10 filter-based air sample results, analyzed at the off-site laboratory, were above the action level, the average daily real-time dust monitoring results (DustTrak™ results) were below the DTSC action level on June 21, 2021.

On July 9, 2021, the upwind result was above the action level and the downwind result was below the action level ($52.1 \mu\text{g}/\text{m}^3$ and $38.5 \mu\text{g}/\text{m}^3$, respectively). Wind speed was 7.2 mph and the wind direction was west (Attachment 1, Table 1), so results were not subtracted. Although the PM10 filter-based air sample results, analyzed at the off-site laboratory, were above the action level, the average daily real-time dust monitoring results (DustTrak™ results) were below the DTSC action level on July 9, 2021.

A summary of air sampling station downtime for the reporting period is as follows:

- July 6, 2021—The upwind air sampling station was moved approximately 15 meters (50 feet) upwind to sampling location 1A before start of work.

5.8 Report 008

There were PM₁₀ exceedances above the DTSC HERO developed action level (50 µg/m³) on the following dates (Attachment 1, Table 3):

- August 16, 2021 (upwind)
- August 20, 2021 (upwind)

Air sampling results are subtracted based on predominant wind direction when wind speeds are greater than 5 mph. Attachment 2 presents a summary of the subtraction criteria. Based on wind direction and wind speed, site-related PM₁₀ concentrations were not subtracted for the listed dates.

On August 16, 2021, the upwind result was above the action level and the downwind result was below the action level (53.6 µg/m³ and 32.5 µg/m³, respectively). Wind speed was 8.9 mph and the wind direction was west (Attachment 1, Table 1), so results were not subtracted. Although the PM₁₀ filter-based air sample results, analyzed at the off-site laboratory, were above the action level, the average daily real-time dust monitoring results (DustTrak™ results) were below the DTSC action level on August 16, 2021. The closest BAAQMD Air Monitor at San Francisco-Arkansas Street had a daily average PM_{2.5} result of 42 µg/m³ on August 16, 2021.

On August 20, 2021, the upwind result was above the action level and the downwind result was below the action level (69.3 µg/m³ and 36.9 µg/m³, respectively). Wind speed was 5.9 mph and the wind direction was west (Attachment 1, Table 1), so results were not subtracted. Although the PM₁₀ filter-based air sample results, analyzed at the off-site laboratory, were above the action level, the average daily real-time dust monitoring results (DustTrak™ results) were below the DTSC action level. The BAAQMD issued “Spare the Air” advisories on August 20 due to pollution from local wildfires. The closest BAAQMD Air Monitor at San Francisco-Arkansas Street had a daily average PM_{2.5} result of 56 µg/m³ on August 20, 2021.

A summary of air sampling station downtime for the reporting period is as follows:

- August 8, 2021—Upwind PM₁₀ unit shut off 12:30–14:15 due to a malfunction with the generator circuit breaker.
- August 16, 2021—Upwind and Downwind generators were serviced. Only Upwind air samplers were down from 7:49–8:05. The downwind air samplers began sampling at 7:46, after the generator was serviced.

5.9 Report 009

There were PM10 exceedances above the DTSC HERO developed action level (50 $\mu\text{g}/\text{m}^3$) on the following dates (Attachment 1, Table 3):

- August 27, 2021 (upwind)
- August 30, 2021 (upwind)
- August 31, 2021 (upwind)
- September 1, 2021 (upwind)
- September 2, 2021 (upwind)
- September 3, 2021 (upwind)
- September 7, 2021 (upwind)
- September 8, 2021 (upwind)
- September 14, 2021 (upwind)
- September 15, 2021 (upwind)
- September 16, 2021 (upwind)
- September 20, 2021 (upwind)
- October 4, 2021 (upwind)
- October 6, 2021 (upwind)
- October 7, 2021 (upwind)
- October 8, 2021 (upwind)

Air sampling results are subtracted based on predominant wind direction when wind speeds are greater than 5 mph. Attachment 2 presents a summary of the subtraction criteria. Based on wind direction and wind speed, site-related PM10 concentrations were not subtracted for the listed dates.

On August 27, 2021, the upwind result was above the action level and the downwind result was below the action level (75.4 $\mu\text{g}/\text{m}^3$ and 46.6 $\mu\text{g}/\text{m}^3$, respectively). Wind speed was 3.4 mph and the wind direction was south (Attachment 1, Table 1), therefore results were not subtracted. Although the PM10 filter-based air sample results, analyzed at the off-site laboratory, were above the action level, the average daily real-time dust monitoring results (DustTrak™ results) were below the DTSC action level on

August 27, 2021. The closest BAAQMD Air Monitor at San Francisco-Arkansas Street had a daily average PM_{2.5} result of 56 µg/m³ on August 27, 2021. The BAAQMD issued a “Spare the Air” advisory for PM_{2.5} on August 27, 2021. While the reported real-time dust monitoring results (measured as PM₁₀) were below the action level, the BAAQMD PM_{2.5} monitor had a daily average PM_{2.5} result of 56 µg/m³.

On August 30, 2021, the upwind result was above the action level and the downwind result was below the action level (57.0 µg/m³ and 34.8 µg/m³, respectively). Wind speed was 7.1 mph and the wind direction was west (Attachment 1, Table 1), therefore results were not subtracted. Although the PM₁₀ filter-based air sample results, analyzed at the off-site laboratory, were above the action level, the average daily real-time dust monitoring results (DustTrak™ results) were below the DTSC action level on August 30, 2021. The closest BAAQMD Air Monitor at San Francisco-Arkansas Street had a daily average PM_{2.5} result of 53 µg/m³ on August 30, 2021. While the reported real-time dust monitoring results (measured as PM₁₀) were below the action level, the BAAQMD PM_{2.5} monitor had a daily average PM_{2.5} result of 53 µg/m³.

On August 31, 2021, the upwind result was above the action level and the downwind result was below the action level (60.2 µg/m³ and 37.3 µg/m³, respectively). Wind speed was 7.8 mph and the wind direction was west (Attachment 1, Table 1), therefore results were not subtracted. Although the PM₁₀ filter-based air sample results, analyzed at the off-site laboratory, were above the action level, the average daily real-time dust monitoring results (DustTrak™ results) were below the DTSC action level on August 31, 2021. The closest BAAQMD Air Monitor at San Francisco-Arkansas Street had a daily average PM_{2.5} result of 48 µg/m³ on August 31, 2021.

On September 1, 2021, the upwind result was above the action level and the downwind result was below the action level (105 µg/m³ and 35.8 µg/m³, respectively). Wind speed was 7.8 mph and the wind direction was southwest (Attachment 1, Table 1), therefore results were not subtracted. Although the PM₁₀ filter-based air sample results, analyzed at the off-site laboratory, were above the action level, the average daily real-time dust monitoring results (DustTrak™ results) were below the DTSC action level on September 1, 2021. The closest BAAQMD Air Monitor at San Francisco-Arkansas Street had a daily average PM_{2.5} result of 49 µg/m³ on September 1, 2021.

On September 2, 2021, the upwind result was above the action level and the downwind result was below the action level (71.4 µg/m³ and 32.7 µg/m³, respectively). Wind speed was 8.4 mph and the wind direction was west-southwest (Attachment 1, Table 1),

therefore results were not subtracted. The average daily real-time dust monitoring results (DustTrak™ results) were also above the DTSC action level on September 2, 2021. The closest BAAQMD Air Monitor at San Francisco-Arkansas Street had a daily average PM2.5 result of 67 $\mu\text{g}/\text{m}^3$ on September 2, 2021. Smoke from local wildfires was observed and caused hazy skies across the Bay area, likely contributing to the elevated PM10 concentrations on September 2, 2021.

On September 3, 2021, the upwind result was above the action level and the downwind result was below the action level (53.9 $\mu\text{g}/\text{m}^3$ and 34.8 $\mu\text{g}/\text{m}^3$, respectively). Wind speed was 6.7 mph and the wind direction was west (Attachment 1, Table 1), therefore results were not subtracted. The average daily real-time dust monitoring results (DustTrak™ results) were also above the DTSC action level on September 3, 2021. The closest BAAQMD Air Monitor at San Francisco-Arkansas Street had a daily average PM2.5 result of 61 $\mu\text{g}/\text{m}^3$ on September 3, 2021. Smoke from local wildfires was observed and caused hazy skies across the Bay area, likely contributing to the elevated PM10 concentrations on September 3, 2021.

On September 7, 2021, the upwind result was above the action level and the downwind result was below the action level (73.3 $\mu\text{g}/\text{m}^3$ and 24.5 $\mu\text{g}/\text{m}^3$, respectively). Wind speed was 6.8 mph and the wind direction was west-southwest (Attachment 1, Table 1), therefore results were not subtracted. Although the PM10 filter-based air sample results, analyzed at the off-site laboratory, were above the action level, the average daily real-time dust monitoring results (DustTrak™ results) were below the DTSC action level on September 7, 2021. The closest BAAQMD Air Monitor at San Francisco-Arkansas Street had a daily average PM2.5 result of 31 $\mu\text{g}/\text{m}^3$ on September 7, 2021. The BAAQMD issued a "Spare the Air" advisory for PM2.5 on September 7, 2021 due to local wildfires.

On September 8, 2021, the upwind result was above the action level and the downwind result was below the action level (55.3 $\mu\text{g}/\text{m}^3$ and 16.2 $\mu\text{g}/\text{m}^3$, respectively). Wind speed was 9.2 mph and the wind direction was west (Attachment 1, Table 1), therefore results were not subtracted. Although the PM10 filter-based air sample results, analyzed at the off-site laboratory, were above the action level, the average daily real-time dust monitoring results (DustTrak™ results) were below the DTSC action level on September 8, 2021. The closest BAAQMD Air Monitor at San Francisco-Arkansas Street had a daily average PM2.5 result of 31 $\mu\text{g}/\text{m}^3$ on September 8, 2021.

On September 14, 2021, the upwind result was above the action level and the downwind result was below the action level (65.5 $\mu\text{g}/\text{m}^3$ and 24.1 $\mu\text{g}/\text{m}^3$, respectively). Wind speed was 6.4 mph and the wind direction was southwest (Attachment 1, Table 1), therefore results were not subtracted. Although the PM10 filter-based air sample results, analyzed at the off-site laboratory, were above the action level, the average daily real-time dust monitoring results (DustTrak™ results) were below the DTSC action level on September 14, 2021. The closest BAAQMD Air Monitor at San Francisco-Arkansas Street had a daily average PM2.5 result of 40 $\mu\text{g}/\text{m}^3$ on September 14, 2021.

On September 15, 2021, the upwind result was above the action level and the downwind result was below the action level (102 $\mu\text{g}/\text{m}^3$ and 22.5 $\mu\text{g}/\text{m}^3$, respectively). Wind speed was 7.9 mph and the wind direction was west (Attachment 1, Table 1), therefore results were not subtracted. Although the PM10 filter-based air sample results, analyzed at the off-site laboratory, were above the action level, the average daily real-time dust monitoring results (DustTrak™ results) were below the DTSC action level on September 15, 2021. The closest BAAQMD Air Monitor at San Francisco-Arkansas Street had a daily average PM2.5 result of 49 $\mu\text{g}/\text{m}^3$ on September 15, 2021.

On September 16, 2021, the upwind result was above the action level and the downwind result was below the action level (59.3 $\mu\text{g}/\text{m}^3$ and 22.3 $\mu\text{g}/\text{m}^3$, respectively). Wind speed was 5.4 mph and the wind direction was west (Attachment 1, Table 1), therefore results were not subtracted. Although the PM10 filter-based air sample results, analyzed at the off-site laboratory, were above the action level, the average daily real-time dust monitoring results (DustTrak™ results) were below the DTSC action level on September 16, 2021. The closest BAAQMD Air Monitor at San Francisco-Arkansas Street had a daily average PM2.5 result of 35 $\mu\text{g}/\text{m}^3$ on September 16, 2021.

On September 20, 2021, the upwind result was above the action level and the downwind result was below the action level (53.6 $\mu\text{g}/\text{m}^3$ and 25.6 $\mu\text{g}/\text{m}^3$, respectively). Wind speed was 1.8 mph and the wind direction was south (Attachment 1, Table 1), therefore results were not subtracted. Although the PM10 filter-based air sample results, analyzed at the off-site laboratory, were above the action level, the average daily real-time dust monitoring results (DustTrak™ results) were below the DTSC action level on September 20, 2021. The closest BAAQMD Air Monitor at San Francisco-Arkansas Street had a daily average PM2.5 result of 29 $\mu\text{g}/\text{m}^3$ on September 20, 2021.

On October 4, 2021, the upwind result was above the action level and the downwind result was below the action level ($61.7 \mu\text{g}/\text{m}^3$ and $18.4 \mu\text{g}/\text{m}^3$, respectively). Wind speed was 3.5 mph and the wind direction was south (Attachment 1, Table 1), therefore results were not subtracted. Although the PM10 filter-based air sample results, analyzed at the off-site laboratory, were above the action level, the average daily real-time dust monitoring results (DustTrak™ results) were below the DTSC action level on October 4, 2021. The closest BAAQMD Air Monitor at San Francisco-Arkansas Street had a daily average PM2.5 result of $36 \mu\text{g}/\text{m}^3$ on October 4, 2021.

On October 6, 2021, the upwind result was above the action level and the downwind result was below the action level ($55.8 \mu\text{g}/\text{m}^3$ and $20.2 \mu\text{g}/\text{m}^3$, respectively). Wind speed was 6.5 mph and the wind direction was west-southwest (Attachment 1, Table 1), therefore results were not subtracted. Although the PM10 filter-based air sample results, analyzed at the off-site laboratory, were above the action level, the average daily real-time dust monitoring results (DustTrak™ results) were below the DTSC action level on October 6, 2021. The closest BAAQMD Air Monitor at San Francisco-Arkansas Street had a daily average PM2.5 result of $17 \mu\text{g}/\text{m}^3$ on October 6, 2021.

On October 7, 2021, the upwind result was above the action level and the downwind result was below the action level ($53.8 \mu\text{g}/\text{m}^3$ and $18.6 \mu\text{g}/\text{m}^3$, respectively). Wind speed was 8.3 mph and the wind direction was west-southwest (Attachment 1, Table 1), therefore results were not subtracted. Although the PM10 filter-based air sample results, analyzed at the off-site laboratory, were above the action level, the average daily real-time dust monitoring results (DustTrak™ results) were below the DTSC action level on October 7, 2021. The closest BAAQMD Air Monitor at San Francisco-Arkansas Street had a daily average PM2.5 result of $32 \mu\text{g}/\text{m}^3$ on October 7, 2021.

On October 8, 2021, the upwind result was above the action level and the downwind result was below the action level ($58.9 \mu\text{g}/\text{m}^3$ and $17.5 \mu\text{g}/\text{m}^3$, respectively). Wind speed was 10.8 mph and the wind direction was west (Attachment 1, Table 1), therefore results were not subtracted. Although the PM10 filter-based air sample results, analyzed at the off-site laboratory, were above the action level, the average daily real-time dust monitoring results (DustTrak™ results) were below the DTSC action level on October 8, 2021. The closest BAAQMD Air Monitor at San Francisco-Arkansas Street had a daily average PM2.5 result of $17 \mu\text{g}/\text{m}^3$ on October 8, 2021.

A summary of air sampling station downtime for the reporting period is as follows:

- September 27, 2021—Downwind generator was started 1 hour late due to servicing.
- October 14, 2021—Upwind air sampler Location 1A was offline for approximately 13 hours due to a generator malfunction.

5.10 Report 010

There were no site-related exceedances above air sampling threshold criteria and action levels during this reporting period.

A summary of air sampling station downtime for the reporting period is as follows:

- October 19, 2021—The upwind and downwind air samplers were offline for approximately 15:35 and 16:06 hours, respectively, due to rain.
- October 20, 2021—The upwind and downwind air samplers were offline for approximately 21.75 hours and 22 hours, respectively, due to rain.
- October 21, 2021—The upwind and downwind air samplers were offline for approximately 9.75 hours and 10 hours, respectively, due to rain.
- October 25, 2021—Upwind and downwind generators were serviced. Downwind and upwind generators were down for approximately 15 minutes each.
- October 27, 2021—Upwind and downwind units were offline for approximately 13 hours due to no workers being on site.
- October 28-29, 2021—Upwind and downwind locations offline due to no workers being on site.

5.11 Report 011

There were PM₁₀ exceedances above the DTSC HERO developed action level (50 µg/m³) on the following dates (Attachment 1, Table 3):

- June 2, 2022 (upwind)
- June 13, 2022 (upwind)
- June 14, 2022 (upwind)
- June 15, 2022 (upwind)

- June 16, 2022 (upwind)
- June 28, 2022 (upwind)

Air sampling results are subtracted based on predominant wind direction when wind speeds are greater than 5 mph. Attachment 2 presents a summary of the subtraction criteria. Based on wind direction and wind speed, site-related PM10 concentrations were not subtracted for the listed dates.

The project re-mobilized on May 31, 2022, and activities entailing site setup and personnel training occurred during that first week from May 31 through June 3, 2022. Field activities, including earth moving activities, began on June 6, 2022. During re-mobilization and site setup, air monitoring was performed and those results, while not complete, are included in this report. Although site field activities had not started, on June 2, 2022, the upwind result was above the action level and the downwind result was below the action level ($65.8 \mu\text{g}/\text{m}^3$ and $4.35 \mu\text{g}/\text{m}^3$, respectively). Work was active at adjacent Parcels E and E-2, which may have contributed to the PM10 measurement at the upwind location. Wind speed was 11.2 mph and the wind direction was west (Attachment 1, Table 1), therefore results were not subtracted. The closest BAAQMD Air Monitor at San Francisco-Arkansas Street had a daily average PM2.5 result of $15 \mu\text{g}/\text{m}^3$ on June 2, 2022. Although the PM10 filter-based air sample results, analyzed at the off-site laboratory, were above the action level, no earth moving work was conducted on site for June 2, 2022 through June 3, 2022. Upwind exceedances were likely due to adjacent parcel truck activity.

The week of June 13 through 17, 2022, the upwind results were above the action level for four days and the downwind results were below the action level (see the following summary table). Based on wind direction and wind speed, site related PM10 concentrations were not subtracted for the listed dates. Although the PM10 filter-based air sample results, analyzed at the off-site laboratory, were above the action level, the average daily real-time dust monitoring results (DustTrak™ results) were below the DTSC action level on all four days. The closest BAAQMD Air Monitor at San Francisco-Arkansas Street had a daily average PM2.5 results ranging from 11 to 51 µg/m³ on these dates, indicating elevated regional PM2.5 concentrations during this timeframe. During this week, truck traffic increased near the upwind Parcel G air monitoring station due to off-site transportation and disposal activities at Parcel E and soil spreading activities at Parcel E-2.

Date	PM10 Result Location 1A (Upwind) (µg/m ³)	PM10 Result Location 18 (Downwind) (µg/m ³)	Wind Speed (MPH)	Wind Direction	Results Subtracted?	Real-Time Dust Location 1A (µg/m ³)	BAAQMD San Francisco-Arkansas Street PM2.5 (µg/m ³)
6/13/22	58.6	26.9	6.1	West	No	12.6	28
6/14/22	68.0	34.1	7.2	West	No	25.5	51
6/15/22	93.3	27.8	9.9	West	No	30.3	48
6/16/22	112	19.0	11.3	West	No	4.9	11

On June 28, 2022, the upwind result was above the action level and the downwind result was below the action level (63.9 µg/m³ and 24.7 µg/m³, respectively). Wind speed was 9.25 mph and the wind direction was west (Attachment 1, Table 1); therefore, results were not subtracted. Although the PM10 filter-based air sample results, analyzed at the off-site laboratory, were above the action level, the average daily real-time dust monitoring results (DustTrak™ results) were below the DTSC action level on June 28, 2022. The closest BAAQMD Air Monitor at San Francisco-Arkansas Street had a daily average PM2.5 result of 26 µg/m³ on June 28, 2022. On June 28, 2022, truck traffic increased near the upwind Parcel G air station due to off-site transportation and disposal activities at Parcel E and soil spreading activities at Parcel E-2.

A summary of air sampling station downtime for the reporting period is as follows:

- December 10, 2021–June 1, 2022: No air monitoring due to temporary demobilization and no workers being on site.

5.12 Report 012

There were PM10 exceedances above the DTSC HERO developed action level (50 µg/m³) on the following dates (Attachment 1, Table 3):

- July 8, 2022 (upwind)
- July 11, 2022 (upwind)
- July 14, 2022 (upwind)
- July 21, 2022 (upwind)
- July 27, 2022 (upwind)

Based on wind direction and wind speed, site related PM10 concentrations were not subtracted. Attachment 2 presents a summary of the subtraction criteria. Although the PM10 filter-based air sample results, analyzed at the off-site laboratory, were above the action level, the average daily real-time dust monitoring results (DustTrak™ results) were below the DTSC action level on all five days.

Date	PM10 Result Location 1A (Upwind) (µg/m ³)	PM10 Result Location 18 (Downwind) (µg/m ³)	Wind Speed (MPH)	Wind Direction	Results Subtracted?	Real-Time Dust Location 1A (µg/m ³)	BAAQMD San Francisco-Arkansas Street PM2.5 (µg/m ³)
7/8/22	54.4	11.8	9.64	West	No	11.05	7
7/11/22	54.3	9.58	9.00	West	No	17.84	21
7/14/22	78.8	24.7	9.13	WSW	No	24.93	37
7/21/22	73.7	8.66	9.08	West	No	10.56	9
7/27/22	94.5	2.76	8.91	West	No	5.90	0

On all five days, soil spreading activities at Parcel E-2 were observed. On July 8 and 27, 2022, truck traffic increased near the Parcel G upwind air monitoring station Location 1A due to off-site transportation and disposal activities at Parcel E. During the week of July 11 through 15, 2022, smoke was observed from the Contra Costa wildfires, potentially contributing to the elevated PM10 concentrations on July 11 and 14, 2022.

A summary of air sampling station downtime for the reporting period is as follows:

- July 28, 2021—The downwind air samplers were offline for approximately two hours in the morning due to generator malfunction.

5.13 Report 013

There were PM10 exceedances above the DTSC HERO developed action level (50 $\mu\text{g}/\text{m}^3$) on the following dates (Attachment 1, Table 3):

- August 4, 2022 (upwind)
- August 9, 2022 (upwind)
- August 10, 2022 (upwind)
- August 11, 2022 (upwind)
- August 15, 2022 (upwind)
- August 18, 2022 (upwind)
- August 22, 2022 (upwind)
- August 23, 2022 (upwind)
- August 25, 2022 (upwind)
- August 29, 2022 (upwind)
- September 1, 2022 (upwind)

Based on wind direction and wind speed, site related PM10 concentrations were not subtracted. Attachment 2 presents a summary of the subtraction criteria. Although the upwind PM10 filter-based air sample results, analyzed at the off-site laboratory, were above the action level, downwind air sample results and the average daily real-time dust monitoring results (DustTrak™ results) were below the DTSC action level on all 11 days.

Date	PM10 Result Location 1A (Upwind) ($\mu\text{g}/\text{m}^3$)	PM10 Result Location 18 (Downwind) ($\mu\text{g}/\text{m}^3$)	Wind Speed (MPH)	Wind Direction	Results Subtracted?	Real-Time Dust Location 1A ($\mu\text{g}/\text{m}^3$)	BAAQMD San Francisco-Arkansas Street PM2.5 ($\mu\text{g}/\text{m}^3$)
8/4/22	320.0	41.5	9.28	West	No	21.23	12
8/9/22	56.3	12.6	8.74	West	No	6.92	12
8/10/22	110	11.8	7.69	West	No	6.94	37
8/11/22	268	19.1	9.82	West	No	10.80	9
8/15/22	68.1	40	7.04	West	No	32.78	45
8/18/22	62.6	11.6	8.89	West	No	7.25	12

5.0 Air Sampling Results

Date	PM10 Result Location 1A (Upwind) (µg/m ³)	PM10 Result Location 18 (Downwind) (µg/m ³)	Wind Speed (MPH)	Wind Direction	Results Subtracted?	Real-Time Dust Location 1A (µg/m ³)	BAAQMD San Francisco-Arkansas Street PM2.5 (µg/m ³)
8/22/22	58.4	15.6	9.42	WSW	No	8.76	2
8/23/22	88.8	13.3	7.59	WSW	No	6.31	0
8/25/22	62.8	18.6	7.3	WSW	No	3.21	2
8/29/22	79.9	26.8	8.4	West	No	20.0	41
9/1/22	51.7	13.7	8.3	West	No	18.7	26

Throughout the first two weeks of August 2022, soil moving and spreading activities were observed at Parcel E-2, west of the upwind air sampler, potentially contributing to the elevated PM10 results on August 4, 9, 10, and 11. From August 1 to 7 and August 11 to September 1, truck traffic increased near the Parcel G upwind air monitoring station Location 1A due to off-site transportation and disposal activities at Parcel E. On August 9, 10, 11, and 23, 2022, street sweepers were cleaning the perimeter of Parcel G, passing the upwind air monitoring station.

A summary of air sampling station downtime for the reporting period is as follows:

- August 11, 2022—The upwind air samplers were offline for 1.78 hours in the morning due to generator shutoff from low fuel.

5.14 Report 014

There were PM10 exceedances above the DTSC HERO developed action level (50 µg/m³) on the following dates (Attachment 1, Table 3):

- September 12, 2022 (upwind)
- September 15, 2022 (upwind)
- September 28, 2022 (upwind)

Date	PM10 Result Location 1A (Upwind) (µg/m ³)	PM10 Result Location 18 (Downwind) (µg/m ³)	Wind Speed (MPH)	Wind Direction	Results Subtracted?	Real-Time Dust Location 1A (µg/m ³)	BAAQMD San Francisco-Arkansas Street PM2.5 (µg/m ³)
9/12/2022	72.0	11.5	9.86	WSW	No	33.7	55
9/15/2022	74.3	14.5	9.01	WSW	No	20.0	22
9/28/2022	127	8.52	8.14	W	No	10.4	25

On September 12, 2022, the BAAQMD issued a “Spare the Air” advisory for PM2.5. On September 12, 15, and 28, 2022, soil excavation, moving, and spreading activities were observed at adjacent parcels potentially contributing to the elevated PM10 measured at the upwind sampling location. On September 12 and 28, 2022 but not, September 15, 2022, truck traffic was increased near the Parcel G upwind air monitoring station Location 1A due to off-site transportation and disposal activities at Parcel E and portal monitoring operations.

There were no air sampling station downtimes for the reporting period.

5.15 Report 015

There were PM10 exceedances above the DTSC HERO developed action level (50 µg/m³) on the following dates (Attachment 1, Table 3):

- October 3, 2022 (upwind)
- October 4, 2022 (upwind)
- October 6, 2022 (upwind)
- October 20, 2022 (upwind)

- October 26, 2022 (upwind)
- November 4, 2022 (upwind and downwind)

Date	PM10 Result Location 1A (Upwind) ($\mu\text{g}/\text{m}^3$)	PM10 Result Location 18 (Downwind) ($\mu\text{g}/\text{m}^3$)	Wind Speed (MPH)	Wind Direction	Results Subtracted?	Real-Time Dust Location 1A ($\mu\text{g}/\text{m}^3$)	BAAQMD San Francisco-Arkansas Street PM2.5 ($\mu\text{g}/\text{m}^3$)
10/3/2022	163	26.9	8.20	W	No	12.3	19
10/4/2022	74.4	25.3	8.10	WSW	No	14.9	19
10/6/2022	56.3	29.9	6.10	W	No	8.3	10
10/20/2022	73.1	23.4	1.30	WNW	No	36.8	42
10/26/2022	57.4	10.7	4.29	WSW	No	14.0	30
11/4/2022	119	97	4.34	S	No	9.8	11

On October 3, 4, 6, 20, and 26, 2022, soil excavation, moving, and spreading activities were observed at adjacent parcels potentially contributing to the elevated PM10 measured at the upwind sampling location. On all days with exceedances, truck traffic was increased near the Parcel G upwind air monitoring station Location 1A due to off-site transportation and disposal activities at Parcel E.

A summary of air sampling station downtime for the reporting period is as follows:

- October 17, 2022—The downwind PM10 air samplers were offline for 2.00 hours in the beginning of the day due to a hardware malfunction.
- October 18, 2022—The upwind and downwind TSP air samplers were offline for 24.0 hours due to supply chain issues and late delivery of the air filters.
- October 19, 2022—All air samples were offline for 5.58 hours due to supply chain issues and late delivery of the air filters.
- November 3, 2022—The downwind PM10 and TSP air samplers were offline for 2.00 hours due to a generator malfunction.

5.16 Report 016

There were PM10 exceedances above the DTSC HERO developed action level (50 µg/m³) on the following dates (Attachment 1, Table 3):

- April 11, 2023 (upwind)
- April 13, 2023 (upwind)
- April 20, 2023 (upwind)
- April 24, 2023 (upwind)
- April 25, 2023 (upwind)
- May 1, 2023 (upwind)
- May 9, 2023 (upwind)
- May 10, 2023 (upwind)
- May 11, 2023 (upwind)

Date	PM10 Result Location 1A (Upwind) (µg/m ³)	PM10 Result Location 18 (Downwind) (µg/m ³)	Wind Speed (MPH)	Wind Direction	Results Subtracted?	Real-Time Dust Location 1A (µg/m ³)	BAAQMD San Francisco-Arkansas Street PM2.5 (µg/m ³)
4/11/2023	97.7	29.5	4.2	WSW	No	8.0	9
4/13/2023	103	25.5	3.1	WSW	No	13.0	10
4/20/2023	78.7	21.6	2.5	W	No	17.1	13
4/24/2023	88.5	29.1	3.3	SW	No	27.0	16
4/25/2023	68.8	27.3	2.8	WSW	No	25.8	15
5/1/2023	165	13.7	5.2	WSW	No	12.6	7
5/9/2023	174	18.8	4.2	W	No	10.0	3.2
5/10/2023	135	13.3	4.3	WSW	No	7.2	3.3
5/11/2023	108	32.2	4.2	WSW	No	10.7	4.4

The project re-mobilized on April 3, 2023, after a temporary demobilization due to inclement weather. Activities entailing site setup and personnel training occurred from April 3 through 10, 2023. Field activities, including air monitoring and earth moving activities, began on April 11, 2023. During re-mobilization and site setup, air monitoring was not performed as air monitoring equipment was being mobilized and setup, and no earth moving activities occurred.

The April 11, 13, and 20, 2023, PM10 exceedances occurred at the upwind sampling station after a period of rain and strong winds that were not replicated at the downwind air sampling nor the real-time DustTrak stations. Although the DustTrak averages throughout those days were well below the PM10 action level, the real-time DustTrak located closest to the upwind station reported multiple large spikes of dust between the hours of 1400 and 1800. For the three days, maximum PM10 concentrations of 764, 264, and 167 $\mu\text{g}/\text{m}^3$ and wind speeds of 24.4, 18.0, and 15.3 mph were respectively recorded for April 11, 13, and 20, 2023 by the DustTrak and Parcel G wind sensor station. Truck traffic also increased near the Parcel G upwind air monitoring station Location 1A from Parcel E-2. These PM10 spikes and high wind gusts most likely contributed to PM10 exceedances on the filter-based air samples.

On April 24, 25, and May 1, 9, 10, and 11, 2023, soil excavation, moving, and spreading activities were observed at adjacent parcels. Truck traffic also increased near the Parcel G upwind air monitoring station Location 1A due to the transportation of soil from Parcels C to E-2. Trucks were observed idling on the road adjacent to air monitoring stations. These activities potentially contributed to the elevated PM10 measured at the upwind sampling location.

A summary of air sampling station downtime for the reporting period is as follows:

- April 11, 2023—The downwind TSP sampler was offline for 5.5 hours due to equipment malfunction; replacement sampler received that same day.
- April 24, 2023—The downwind PM10 and TSP air samplers were offline for 2.3 hours in the beginning of the day due to a generator malfunction.
- May 8, 2023—The upwind and downwind PM10 and TSP air samplers were offline for 4.8 and 4.6 hours, respectively, due to rain.
- May 11, 2023—The upwind PM10 and TSP air samplers were offline for 2.6 hours in the beginning of the day due to a generator radiator malfunction.

6.0 Data Quality Assessment

Laboratory data were reviewed by the APTIM chemist to verify that analytical results were received from the laboratory, that the results provided in the electronic data deliverable and hard copy forms were the same, and that standard laboratory procedures and protocols were followed. Analytical data for this project were assessed in terms of precision, accuracy, representativeness, completeness, and comparability

based on the requirements of the published EPA analytical methods and laboratory standard operating procedures and as specified in the DMP (APTIM, 2020 [Appendix E]).

Accuracy is demonstrated by recovery of target analytes from fortified blank and sample matrices, laboratory control sample (LCS), laboratory control sample duplicate (LCSD), matrix spike (MS), and matrix spike duplicate (MSD), respectively. The recovery of target analytes from fortified samples is compared to acceptance criteria. When these criteria are not met, the data are flagged appropriately.

Precision is expressed as relative percent difference (RPD) between the results of laboratory replicate sample analyses: sample duplicates (DU), LCSDs, and MSDs. When analyte RPDs exceed the acceptance criteria, the data are flagged appropriately.

Representativeness of the samples submitted for analysis is ensured by adherence to standard sampling techniques and protocols.

Comparability of sample results is ensured through the use of approved consistent sampling and analysis methods.

Completeness is expressed as a ratio of number of usable data to all analytical data collected.

Sensitivity of sample results is ensured through the use of appropriate sampling techniques and analytical methods with detection limits below decision levels.

The laboratory data packages were reviewed at EPA Level II. As applicable to referenced methodology, a Level II data review includes reviewing the following:

- Chain-of-custody/sample receipt
- Method blanks
- Field filter blanks
- Tracer compound recovery (ROCs)
- LCS/LCSD
- MS and MSD and sample duplicates
- Sensitivity
- Completeness (field and technical)

Table 6-1 lists samples collected, collection dates, analyses performed, and laboratory sample delivery groups (SDGs) that are discussed in the following subsections.

Table 6-1: Sample Delivery Group Summary

Date Range	SDG	Analyses
08/24/20 through 08/28/20	37375	PM10, TSP, Metals, Asbestos

Notes:

PM10	particulate matter larger than 10 microns in size
ROC	radionuclide of concern
SDG	sample delivery group
TSP	total suspended particulates

The data quality assessment discusses data review findings and their potential impact on the data quality and usability. Definitions of EPA qualifiers and reason codes applied to the affected sample results that are outside the established control requirements are presented as follows:

Table 6-2: Qualifier Definitions

Qualifier	Definition
	No qualifier indicates that the data are acceptable both qualitatively and quantitatively.
U	The analyte was analyzed for but was not detected above the reported sample quantitation limit.
J	The analyte was analyzed for and was positively identified, but the reported numerical value is estimated. Although the data are considered usable and may be used as appropriate to meet project objectives. Results are qualitatively acceptable and quantitatively uncertain.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate.

Qualifier	Definition
R	The analyte was analyzed for, but the presence or absence of the analyte has not been verified. Qualifier denotes the data are unusable due to deficiencies in the ability to analyze the sample and meet quality control criteria. Results are rejected and data are unusable for project decisions.

6.1 Sample Receipt and Laboratory Narrative

As required by EPA, samples were received at the laboratory under chain-of-custody and were logged in for analysis. Minor log-in discrepancies, if noted by the laboratory were resolved with the Project Chemist prior to analysis. Analyses were completed within method specified holding times for applicable methods. Sample analysis deviations or discrepancies are described as follows:

Table 6-3: Sample Analysis Discrepancies

SDG	Date Range	Analysis	Anomaly/Issue	Resolution
37971	08/31/20– 09/04/20	Asbestos	PG-ASB090120-17DOWNWIND and PG-ASB090220-17DOWNWIND overloaded for asbestos (filters with particulate loading of greater than 50 percent cause potentially biased results)	Due to local forest fires, ash and smoke in the area affected sample collection. No asbestos results reported for 09/01/20 downwind and 09/02/20 downwind.
38566	09/08/20– 09/11/20	Asbestos	PG-ASB091020-1UPWIND and PG-ASB091020-17DOWNWIND overloaded for asbestos (filters with particulate loading of greater than 50 percent cause potentially biased results)	Due to local forest fires, ash and smoke in the area affected sample collection. No asbestos results reported for 09/10/20.
60822	05/24/21– 05/28/21	Asbestos	PG-ASB052621-1UPWIND filter was not analyzed due to the presence of spider in the cartridge. The Sampling Technician checks for insects and removes webs as soon they are observed in the field.	No asbestos result available for 5/26/21 upwind. The downwind sample on 5/26/21 is below the site action limit.
43757	10/18/21– 10/22/21	Sr-90	PG-RAD-10222021-1A/UPWIND sample lost during method preparation due to broken centrifuge tube.	No upwind results reported for 10/22/21, downwind results were below the site action limit.

SDG	Date Range	Analysis	Anomaly/Issue	Resolution
104524	07/18/22– 07/21/22	Asbestos	Eurofins-Cal Science Laboratory shipped the asbestos samples on ice in error. Some of the cartridges were damp upon receipt at the asbestos lab.	Asbestos results were qualified “J” estimated due to potential water interference during analysis.
122416	12/19/22– 12/22/22	Asbestos	PG-ASB122222-1AUPWIND (570-122416-7) was received wet by the subcontract lab.	Asbestos results were qualified “J” estimated due to potential water interference during analysis.

Notes:
SDG

sample delivery group

6.2 Blanks

Laboratory method blanks and field filter blanks were prepared and analyzed as recommended by the referenced methods and the DMP (APTIM, 2020 [Appendix E]). The concentration of target analytes in the laboratory blanks and field blanks were either not detected or below the limit of detection for SDGs with the exceptions noted in this section.

The following radiological results were qualified “JB” due to method blank or field blank contamination:

²³⁹Pu plutonium-239
²⁴⁰Pu plutonium-240
 SDG sample delivery group

Sample radiological results summarized in this section are greater than the minimum detectable concentration but less than 10 times the associated blank results. Sample results were qualified as estimated (JB).

Trace detections of ROCs, specifically ²³²Th, in filter field blanks and samples have been consistent throughout the sampling periods. Communications with the laboratory have also confirmed many filter media contain small amounts of NORM. In accordance with the lab recommendations, APTIM submits a blank filter (same lot/batch) as the samples for use as field method blank to account for NORM in the glass fiber filters used for sampling.

The following metals results were qualified "B" due to method blank contamination:

Table 6-5: Blank Discrepancies for PM10/Total Suspended Particulates/Metals/Asbestos

Notes:

µg/sample microgram per sample
 µg/m³ microgram per cubic meter
 < less than
 J the concentration is an estimated value
 B compound was found in the blank and sample
 N/A not applicable
 PM10 particulate matter larger than 10 microns in size
 SDG sample delivery group

Sample results for metals that were detected less than the laboratory reporting limit (J-qualified) and were less than two times the associated blank results, were qualified as not detected at the reporting limit.

6.3 Laboratory Control Samples

LCSs were prepared and analyzed as required by the referenced methods. The percent recoveries for LCS, LCSD, and RPD were within control limits for all analytical batches containing the samples for this project with the exceptions noted as follows:

Table 6-6: Laboratory Control Spike/Laboratory Control Spike Duplicate Discrepancies

SDG	Date Range	Analyte	LCS/LCSD % Recovery	Control Limit	Qualifier
42325	06/01/21–06/04/21	⁹⁰ Sr	132%/125%	75%–125%	All strontium-90 results in the SDG were qualified as estimated (J) due to high LCS recovery. LCSD percent recovery; LCS/LCSD RER was acceptable
42417	06/07/21–06/11/21				

Notes:

- % percent
- ⁹⁰Sr strontium-90
- LCS laboratory control spike
- LCSD laboratory control spike duplicate
- RER relative error ratio
- SDG sample delivery group

Even though the sample results above were qualified as estimated (J) the LCS/LCSD discrepancies were minor. The sample data usability is not affected.

6.4 Matrix Spikes/Matrix Spike Duplicates/Laboratory Duplicates

Laboratory quality control samples, MS/MSD, and laboratory duplicates were prepared using project samples. The percent recovery MS and MSD were all within the specified control limits, and the RPD between MS/MSD or sample/sample duplicate were within the specific precision control limit with the exceptions noted as follows:

Table 6-7: Matrix Spike/Matrix Spike Duplicate Discrepancies

SDG	Date Range	Sample Spiked	Analyte	MS/MSD % Recovery	Control Limit	Qualifier
38566	09/08/20–09/11/20	PG-TSP090820-1UPWIND	Mn	68%/68%	75%–125%	All manganese results in the SDG were qualified as estimated (J) due to low MS and MSD recovery; matrix interference is suspected.
42858	10/26/20–10/30/20	PG-TSP102620-1UPWIND	Mn	71%/88%	75%–125%	All manganese results in the SDG were qualified as estimated (J) due to low MS recovery; matrix interference is suspected.
60822	05/24/21–05/28/21	PG-TSP-05242-1UPWIND	Pb	68%/70%	75%–125%	All lead results in the SDG were qualified as estimated (J) due to low MS and MSD recovery; matrix interference is suspected.
60822	05/24/21–05/28/21	PG-TSP-05242-1UPWIND	Mn	68%/71%	75%–125%	All manganese results in the SDG were qualified as estimated (J) due to low MS and MSD recovery; matrix interference is suspected.

SDG	Date Range	Sample Spiked	Analyte	MS/MSD % Recovery	Control Limit	Qualifier
62558	06/14/21–06/18/21	PG-TSP061421-1UPWIND	Pb	72%/72%	75%–125%	All lead results in the SDG were qualified as estimated (J) due to low MS and MSD recovery; matrix interference is suspected.
69083	08/23/21–08/27/21	PG-TSP082321-1AUPWIND	Pb	73%/74%	75%–125%	All lead results in the SDG were qualified as estimated (J) due to low MS and MSD recovery; matrix interference is suspected.
69083	08/23/21–08/27/21	PG-TSP082321-1AUPWIND	Mn	67%/68%	75%–125%	All manganese results in the SDG were qualified as estimated (J) due to low MS and MSD recovery; matrix interference is suspected.
72975	10/04/21–10/08/21	PG-TSP100421-1AUPWIND	Pb	113%/84%	75%–125%	RPD fails (29 when limit is 20).
72975	10/04/21–10/08/21	PG-TSP100421-1AUPWIND	Mn	119%/84%	75%–125%	RPD fails (30 when limit is 20).
75083	10/25/21–10/27/21	PG-TSP102521-1AUPWIND	Pb Mn	70% 65%	75%–125% 75%–125%	MS only low recovery; MSD and RPD within control limits.
101548	06/20/22–06/24/22	PG-TSP062022-1AUPWIND	Pb	26% DU	≤20% RPD	All lead results in the SDG were qualified as estimated (J) due to laboratory duplicate RPD fail
115877	10/24/22–10/27/22	PG-TSP102422-1AUPWIND	Pb	73% MSD 27% DU	75%–125% MSD ≤20% RPD	All Pb and Mn results in the SDG were qualified as estimated (J) due to laboratory duplicate MSD and RPD fail
			Mn	65% MSD 36% DU		

SDG	Date Range	Sample Spiked	Analyte	MS/MSD % Recovery	Control Limit	Qualifier
116730	10/31/22– 11/04/22	PG- TSP103122- 1AUPWIND	Pb	70% MSD	75%–125% MSD ≤20% RPD	All Pb and Mn results in the SDG were qualified as estimated (J) due to laboratory duplicate MSD (Mn and Pb) and RPD (Mn only) fail
			Mn	65% MSD 25% DU		
138937	05/01/23– 05/02-23	PG- TSP050123- 1AUPWIND	Mn	80%/62%	75%–125%	All manganese results in the SDG were qualified as estimated (J) due to low MSD recovery.

Notes:

- % percent
- DU sample duplicate
- Mn manganese
- MS matrix spike
- MSD matrix spike duplicate
- Pb lead
- RPD relative percent difference
- SDG sample delivery group

Even though the sample results above were qualified as estimated (J) the MS/MSD discrepancies were minor and LCS/LCSD recoveries indicate acceptable analytical batch precision. The sample data usability is not affected.

6.5 Tracers (Radionuclides of Concern)

A tracer is either an isotope of the same element as the isotope of interest, or an isotope of an element different from the element of the isotope of interest, but one that behaves chemically very similar to the isotope of interest. Tracers are added to both field samples and batch quality control samples prior to sample preparation. The percent recovery of the tracer is used to normalize the measured activity of the isotope of interest.

The review indicated that tracer recoveries were within the established control limits with the exceptions noted as follows:

Table 6-8: Tracer Recovery Discrepancies

SDG	Date Range	Sample	Carrier	Tracer Recovery	Control Limit	Qualifier
39450	09/08/20– 09/11/20	PG-RAD-09112020-1/ UPWIND	²³² Th	111%	40%– 110%	Sample results were qualified as estimated (J) due to potential low bias reflected in high tracer recovery.
39383	08/31/20– 09/04/20	PG-RAD-09042020-17/ DOWNWIND	²³² U	112%	40%– 110%	Sample results were qualified as estimated (J) due to potential low bias reflected in high tracer recovery.
39533	09/14/20– 09/18/20	PG-RAD-09182020-1/ UPWIND	²⁴² Pu	112%	40%– 110%	Sample results were qualified as estimated (J) due to potential low bias reflected in high tracer recovery.
39533	09/14/20– 09/18/20	PG-RAD-09182020-17A/ DOWNWIND	²⁴² Pu	111%	40%– 110%	Sample results were qualified as estimated (UJ) due to potential low bias reflected in high tracer recovery.

SDG	Date Range	Sample	Carrier	Tracer Recovery	Control Limit	Qualifier
39632	09/21/20– 09/25/20	PG-RAD-09252020-1/ UPWIND	²⁴² Pu	112%	40%– 110%	Sample results were qualified as estimated (UJ) due to potential low bias reflected in high tracer recovery.
39632	09/21/20– 09/25/20	PG-RAD-09252020-17A/ DOWNWIND	²⁴² Pu	111%	40%– 110%	Sample results were qualified as estimated (UJ) due to potential low bias reflected in high tracer recovery.
39983	10/12/20– 10/16/20	PG-RAD-10162020-BLANK	²⁴² Pu	111%	40%– 110%	Sample results were qualified as estimated (J/UJ) due to potential low bias reflected in high tracer recovery.
40427	11/11/20– 11/16/20	PG-RAD-11162020-1/ UPWIND	²⁴² Pu	112%	40%– 110%	Sample results were qualified as estimated (UJ) due to potential low bias reflected in high tracer recovery.
40701	11/30/20– 12/05/20	PG-RAD-12052020-1/ UPWIND	²⁴² Pu	111%	40%– 110%	Sample results were qualified as estimated (UJ) due to potential low bias reflected in high tracer recovery.
40701	11/30/20– 12/05/20	PG-RAD-12052020-18/ DOWNWIND	²⁴² Pu	112%	40%– 110%	Sample results were qualified as estimated (UJ) due to potential low bias reflected in high tracer recovery.
40901	12/21/20– 12/22/20	PG-RAD-12222020-BLANK	²³² U	111%	30%– 110%	Sample results were qualified as estimated (J/UJ) due to potential low bias reflected in high tracer recovery.

SDG	Date Range	Sample	Carrier	Tracer Recovery	Control Limit	Qualifier
41247	02/08/21– 02/12/21	PG-RAD-02122021-1/ UPWIND	²³² U	114%	30%– 110%	Sample results were qualified as estimated (UJ) due to potential low bias reflected in high tracer recovery.
42709	07/06/21– 07/09/21	PG-RAD-07092021-18/ DOWNWIND	²⁴² Pu	118%	30%– 110%	Sample results were qualified as estimated UJ due to potential low bias reflected in high tracer recovery.
43382	09/07/21– 09/10/21	PG-RAD-09102021-BLANK	Sr Y	16.5% 17.1%	40%– 110% 40%– 110%	Sample results were qualified as estimated (J/UJ) due to sample loss from a broken centrifuge tube that led to potential high bias reflected in low tracer recovery.

Notes:

- % percent
- ²³²Th thorium-232
- ²³²U uranium-232
- ²⁴²Pu plutonium-242
- Sr strontium
- Y yttrium
- SDG sample delivery group

Although tracer recoveries were outside of specified control limits, the amount of exceedance was minor. All other quality control objectives within the batch were within laboratory control limits. Data usability was not affected.

6.6 Field Sampling Anomalies

Field sampling activities were within the established criteria of the DMP, with the following exception:

- November 22 and 28, 2022—Due to miscommunication between personnel, the filters for the TSP and PM10 air particulate samplers were used on November 22, 2022 and again on November 28, 2022, which violates the 24, ±1, hours runtime from the DMP.

Due to the run-time exceedance, the results are qualified as estimated (J/UJ), as follows:

Table 6-9: Field Sampling Anomalies

SDG	Date Range	Analyte	Sample ID	Result (µg/m3)
119529	11/21/22– 11/22/22	Pb	PG-TSP112222-1AUPWIND	0.00480 J
			PG-TSP112222-18DOWNWIND	<0.00751 J
		Mn	PG-TSP112222-1AUPWIND	0.0448 J
			PG-TSP112222-18DOWNWIND	0.0180 J
		TSP	PG-TSP112222-1AUPWIND	83.3 J
			PG-TSP112222-18DOWNWIND	35.7 J
		PM10	PG-PM10112222-1AUPWIND	30.4 J
			PG-PM10112222-18DOWNWIND	19.1 J

Notes:

Mn manganese
 Pb lead
 SDG sample delivery group

6.7 Sensitivity

Reporting limits for results reported by the laboratory were sufficiently low enough for project decisions.

6.8 Completeness

The following presents a discussion of field and technical completeness for the sampling events.

Field completeness is based on the number of samples/analyses planned compared to the number of results obtained. Field completeness is 100 percent for TSP, PM10, and metals for the sampling completed between August 24, 2020 through October 15, 2021 and June 2, 2022 through May 11, 2023. Field completeness is 99 percent for asbestos for the sampling between August 24, 2020 and May 11, 2023 due to sample loss (overload) caused by local forest fires in August through October 2020 and due to filter damage from a spider on the filter on May 26, 2021. Field completeness is 98 percent for ROCs for the sampling between August 24, 2020 and May 11, 2023, due to sample loss caused by rain damage for the samples collected on January 25, 2021.

Technical completeness is a quantitative measure of the data usability based on the number of rejected data compared to the total number of sample results. The technical-completeness calculation considers data that are not rejected to be usable. The technical-completeness objective is 90 percent. As discussed in the previous subsection, sample results were qualified as estimated (J/UJ) due to method blank laboratory or field quality control outliers. However, the degree of the quality control exceedances was small and did not affect the data usability. The technical completeness was 100 percent for all analyses.

6.9 Summary and Statement of Data Usability

Based on the above data review there were no significant systematic problems identified with the analytical method performance. Although some results were flagged as estimated due to deficiencies, the data usability was not affected. Data meets the quality objectives for the intended use.

Attachment 1, Table 1: Ambient Pressure and Temperature Monitoring Results

Notes:

Wind, ambient pressure and ambient temperature data were retrieved from on-site APTIM MET Station (8/26/20-8/28/20, 8/31/20-9/18/20, 11/9/20-10/15/21).

Wind, ambient pressure and ambient temperature data were retrieved from KSFO, San Francisco, San Francisco International Airport (8/24/20-8/25/20, 9/21/20-11/7/20).

°C - degrees Celsius

in Hg - inches of mercury

mph - miles per hour

Attachment 1, Table 2: TSP and Metals Sampling Results

Notes:

Note 1: Sample not collected due to inclement conditions (rain).

Note 2: Sample not collected because the site was temporarily shut down and no workers were on site.

Note 3: Samples not collected due to lack of inventory for air sampling.

Note 4: Samples for 11/22/22 and 11/28/22 used the same filters due to operations setup error.

Sample locations are shown on Figure 1.

$\mu\text{g}/\text{m}^3$ - microgram per cubic meter

TSP - total suspended particulates

B - compound was found in the blank and sample

J - the concentration is an estimated value

Attachment 1, Table 3: PM10 Air Sampling Results

Notes:

Note 1: Elevated particulate matter levels observed regionally. This exceedance is likely not due to site activities.

Note 2: Based on wind direction and wind speed, site-related PM10 concentrations were below the 50 µg/m³ action level.

Note 3: Upwind air sample result is above the action level; however, the downwind result is below the action level.

Note 4: Sample not collected due to inclement conditions (rain).

Note 5: Sample not collected because the site was temporarily shut down and no workers were onsite.

Note 6: Air sample results are above the action level; however, the Real-Time Dust Monitoring results are below the action level.

Note 7: Samples for 11/22/22 and 11/28/22 used the same filters due to operations setup error.

BAAQMD implements the CSAAQS for the Bay Area. The CSAAQS is designed to protect the general public from airborne particulates generated in the urban, suburban, and rural environments. The CSAAQS is not meant to be applied to general project-specific construction actions and related air quality. Rather, the standard is used to attain city- or regional-wide ambient air quality goals for the benefit of the general public. The current CSAAQS for PM10 is 50 µg/m³ average per 24-hour day. The City and County of San Francisco is currently a non-attainment area for the CSAAQS for PM10.

Sample locations are shown on Figure 1.

^a Cal/OSHA PEL (on-site workers)

^b DTSC HERO developed action level (residents and public receptors), based on the CSAAQS

≤ - less than or equal to

µg/m³ - microgram per cubic meter

BAAQMD - Bay Area Air Quality Management District

Cal/OSHA - California Occupational Safety and Health Administration

CSAAQS - California State ambient air quality standard

DTSC - California Department of Toxic Substances Control

HERO - Human and Ecological Risk Office

PEL - permissible exposure limit

PM10 - particulate matter smaller than 10 microns in diameter

Attachment 1, Table 4: Asbestos Sampling Results

Notes:

Note 1: Sample not collected due to inclement weather conditions (rain).

Note 2: Filter cartridge overloaded due to ash from forest fires.

Note 3: Sample not collected because the site was temporarily shut down and no workers were onsite.

Note 4: Sample was not collected due to a delay in air sampling set-up. No field activities occurred on this day.

Note 5: Filter cartridge was damaged and could not be analyzed.

Note 6: Filter cartridge was water damaged due to laboratory shipment error and may negatively affect the accuracy of the results

Note 7: Samples collected used old filters from 11/22/22 due to operations setup error.

Sample locations are shown on Figure 1.

< - less than

≤ - less than or equal to

fibers/cm³ - fibers per cubic centimeter

Attachment 1, Table 5: Radionuclides of Concern Air Sampling Results

Notes:

Note 1: Sample not collected because the site was temporarily shut down and no workers were on site.

Note 2: Sample not collected or not analyzed due to inclement weather conditions (rain).

Note 3: Sample exceeded the thorium-232 action limit; field blank sample also exceeded the thorium-232 action limit. Results may be due to naturally occurring radioactive material (NORM) contained in the glass fiber filters.

Note 4: Sample not collected because the site was temporarily shut down and workers were performing storm damage repairs only.

Sampling period for week 9/08/20 - 9/11/20 is less than 104 hours due to the Labor Day holiday.

Sampling period for the upwind air sampling station week 9/21/20 - 9/25/20 is less than 104 hours due to a generator malfunction.

Sampling period for the downwind air sampling station week 10/12/20 - 10/16/20 is less than 104 hours due to relocating the station outside the radiologically controlled area.

Sampling period for week 11/23/20 - 11/25/20 is less than 104 hours due to company holidays (Thanksgiving and the day after Thanksgiving).

Sampling period for week 12/21/20 - 12/22/20 is less than 104 hours due to weather conditions (rain).

Sampling period for week 1/5/21 - 1/8/21 is less than 104 hours due to weather conditions (rain).

Sampling period for week 1/20/21 - 1/22/21 is less than 104 hours due to weather conditions (wind and rain).

Sampling period for week 2/8/21 - 2/12/21 is less than 104 hours due to weather conditions (rain).

Sampling period for week 2/15/21 - 2/19/21 is less than 104 hours due to weather conditions (rain).

Sampling period for week 5/24/21 - 5/28/21 is less than 104 hours due to generator set-up.

Sampling period for week 6/1/21 - 6/4/21 is less than 104 hours due to company holiday (Memorial Day).

Sampling period for week 7/6/21 - 7/9/21 is less than 104 hours due to company holiday (Fourth of July, observed).

Sampling period for week 9/7/21 - 9/10/21 is less than 104 hours due to the Labor Day holiday.

Sampling period for week 9/27/21-10/1/21 is less than 104 hours due to generator servicing.

Sampling period for the upwind sample in week 10/11/21-10/15/21 is less than 104 hours due to the generator shutting down overnight for approximately 13 hours.

Sampling period for week 10/25/21-10/27/21 is less than 104 hours due to no site activities.

Sampling period for week 11/22/21-11/23/21 is less than 104 hours due to company holiday (Thanksgiving and the day after Thanksgiving).

Sample locations are shown on Figure 1.

µCi/mL - microcurie per milliliter

J - the concentration is an approximate value

JB - indicates the detected concentrations is estimated due to blank/background detections

U - not detected at specified reporting limit

UJ - not detected at specified reporting limit; the concentration is an approximate value

NR - Results not reported due to sample loss during analytical preparation

ATTACHMENT 2

AIR MONITORING RESULTS SUBTRACTION CRITERIA

Parcel G Air Monitoring Results Subtraction Criteria

Predominant Wind Direction		Air Monitoring Results Analysis^{a, b}
N	Wind blows from N to S	Deduct upwind station results from downwind station results
NNE	Wind blows from NNE to SSW	No deduction but may compare site results, location of site activities, and off-site activities potentially generating particulates to determine site-related impacts
NE	Wind blows from NE to SW	No deduction but may compare site results, location of site activities, and off-site activities potentially generating particulates to determine site-related impacts
ENE	Wind blows from ENE to WSW	No deduction but may compare site results, location of site activities, and off-site activities potentially generating particulates to determine site-related impacts
E	Wind blows from E to W	No deduction but may compare site results, location of site activities, and off-site activities potentially generating particulates to determine site-related impacts
ESE	Wind blows from ESE to WNW	Deduct downwind station results from upwind station results (i.e., switch downwind/upwind when predominant wind blowing in this direction)
SE	Wind blows from SE to NW	Deduct downwind station results from upwind station results (i.e., switch downwind/upwind when predominant wind blowing in this direction)
SSE	Wind blows from SSE to NNW	Deduct downwind station results from upwind station results (i.e., switch downwind/upwind when predominant wind blowing in this direction)
S	Wind blows from S to N	Deduct downwind station results from upwind station results (i.e., switch downwind/upwind when predominant wind blowing in this direction)
SSW	Wind blows from SSW to NNE	No deduction but may compare site results, location of site activities, and off-site activities potentially generating particulates to determine site-related impacts
SW	Wind blows from SW to NE	No deduction but may compare site results, location of site activities, and off-site activities potentially generating particulates to determine site-related impacts

Predominant Wind Direction		Air Monitoring Results Analysis ^{a, b}
WSW	Wind blows from WSW to ENE	No deduction but may compare site results, location of site activities, and off-site activities potentially generating particulates to determine site-related impacts
W	Wind blows from W to E	No deduction but may compare site results, location of site activities, and off-site activities potentially generating particulates to determine site-related impacts
WNW	Wind blows from WNW to ESE	Deduct upwind station results from downwind station results
NW	Wind blows from NW to SE	Deduct upwind station results from downwind station results
NNW	Wind blows from NNW to SSE	Deduct upwind station results from downwind station results

Notes:

^a Air monitoring includes filter-based air sampling and real-time dust monitoring.

^b Air monitoring results will be subtracted based on predominant wind direction when wind speeds are greater than 5 miles per hour.
