(U) SIGABA (ECM-134-C) Ser No. 140 Restoration Project

(C) Due to the renovation work going on at NCPAC [REDACTED] most personnel have been moved to other locations across the Island. Originally it had been planned to keep the SIGABA and the restoration work within a protected region of NCPAC spaces - that the restoration work is "working around". However, the best laid plans of mice and men ...

(U) So, this week, SIGABA SN 140 was moved from NCPAC to NSAH (at Kunia) into new spaces that will be used for the continuation of the renovation work. I will have easy enough access to the new space and the restoration should proceed uninhibited there.

(U) Currently, I should have been working on a plan for the breakdown of the main portion of the machine. This has been somewhat hampered by our movement out of the building and the challenges of new work spaces. However, with the move of the machine into new spaces for restoration, I am hopeful that we will get back on track here shortly.
